

MISSION

TIMES MICROWAVE SYSTEMS designs and manufactures high performance RF transmission line for the telecommunications industry.

These products consist of flexible coaxial cable, connectors, accessories and cable assemblies

We are committed to understanding the needs and requirements of our customers and providing highly engineered, cost effective products.

TIMES MICROWAVE SYSTEMS is dedicated to *total* customer satisfaction and superior results for our shareholders in all we do.

Broadband Series**

World Class Products for Wireless Applications

The History of TMS

Times Microwave Systems (TMS) was founded in 1948 as the Times Wire and Cable Company. TMS is an engineering oriented organization specializing in the design and manufacture of high performance flexible and semi-rigid coaxial cable, connectors, and cable assemblies for RF transmission from HF through Microwave frequencies. TMS is committed to continuous improvement with respect to ISO-9001 Quality Standards and ISO-14001 Environmental Management Systems.

The expertise that provided cable solutions for the demanding requirements of airborne electronic warfare systems and led the way in the development of low smoke cables for shipboard applications is now yielding

high performance cables to meet the needs of the wireless communications market. The innovative product line provides a better alternative to corrugated copper cables for antenna feeders and system interconnects. Compared to corrugated copper cables, LMR cables offer better flexibility, resistance to linking, comparable attenuation, and easier connector attachment at a lower cost.

The work performed at TMS in the 60's, 70's, and 80's forms the basis for today's high performance coaxial cables. TMS pioneered the development of closed cell low loss polyethylene foam dielectric and low loss taped PTFE dielectric coaxial cables. Through a thorough understanding of transmission line theory and manufacturing processes, TMS was the first to produce cables with reduced periodicity and impedance matched interfaces, resulting in the first transmission lines with low

VSWR over broadband frequency ranges up to 40 GHz. The development of connector design and manufacturing expertise allowed TMS to take full performance responsibility for the entire cable assembly, which was unprecedented at the time.

TMS has been instrumental in the development of military specifications, including MIL-C-17 for coaxial cables. Times is the leading source of MIL-C-17 qualified products, holding far more QPL's (Qualified Product Listings) than any other manufacturer in the world. Times also helped the US Navy write the MIL-T-81490 Transmission Line Specification, and is qualified to supply microwave transmission lines that meet MIL-T-81490 and MIL-C-87104 (US Air Force) requirements. These are the specifications that define harsh military airborne environments that Electronic Warfare transmission lines must perform in, year after year.

TMS applies its expertise to customer requirements through a staff of Field Application Engineers. Unlike other cable manufacturers with limited product lines, who try to fit customer applications to their existing products, the philosophy of TMS is to select or design the right product for the application. This results in an optimal and cost effective solution.

TMS is the leader in the design, qualification, manufacture, and on-time delivery of high performance cable and cable assembly products to the commercial wireless and military marketplace. In 2003, TMS was selected by Lockheed Martin Aeronautics to supply the Broadband Airborne Cable Assemblies on the F-35 Joint Strike Fighter (JSF). TMS was chosen to supply this solution since its high performance cable assemblies are able to handle high-speed data in extreme avionics environments including wide variations in temperature and pressure.

LMR® discussion

What is LMR® cable?

Times LMR cables are high performance broadband, flexible, low loss 50 Ohm coaxial communication cables designed for use in wireless applications such as:

- Private land mobile/2-way land mobile
- WiFi/WiMax
- Cellular
- Paging
- Satellite
- Cellular
- Paging
- GPS
- RFID
- In-Building Communications
- Oil & Gas
- Utilities
- Positive Train Control (PTC)
- Distributed Antenna Systems (DAS)
- Public Safety
- Wireless Internet (WISP)
- SCADA/Telemetry

- Broadband
- Wireless Machine-to-Machine (Wireless M2M)
- Military/Defense

Where can LMR® cables be used?

Times LMR cables can be used virtually anywhere high performance coaxial cables are used, including:

- Internal component and equipment wiring
- Inter/intra cabinet jumpers
- Base station and antenna jumpers
- Tower and pole feeder runs
- In-building runs, including riser runs and air-handling plenums
- Rooftop installations

What sizes of LMR® cable are available?

A full range of LMR cables are available from LMR-100 (0.100") all the way up to LMR-1700-DB (1 1/4"). Because LMR cables are so flexible, it's possible to eliminate jumpers entirely in many feeder cable applications. The elimination of jumper cables provides reduced cost, better reliability and lower cost- or may even allow the use of a smaller size feeder cable, while achieving the same loss as for a larger corrugated feeder.

What are the advantages of LMR®?

Times LMR cables have RF performance comparable to traditional corrugated copper cables, but unlike corrugated cables they are highly flexible, non-kinking, and offer unsurpassed ease and speed of connector installation. Compared to RG type braided cables, LMR cables offer far lower loss and better RF shielding. These features make LMR cables the best choice for *any* wireless application.

What makes LMR® cable different than corrugated cables?

Design features of Times LMR cable include:

1) Polyethylene Foam Dielectric

- Closed cell
- Dry nitrogen gas injected- no moisture to degrade performance
- High velocity
- Low loss

2) High Performance Flexible Shielding System

- Multi-laminar aluminum composite tape bonded to the dielectric
- Provides >90dB isolation shielding (180dB cross talk)
- Bonded construction ensures 100% effective shielding
- Acts as a second moisture barrier
- Outer Braid of tinned copper:
 - Provides positive means for grounding and connector attachment

3) Polyethylene Outer Jacket

- Heavy duty UV, sunlight and weather resistant, 20 to 40 year life

How does LMR® cable compare to RG type braided cable or 9913?

LMR cables have lower loss and far better shielding than comparably sized braided cables. Polyethylene jacket, closed cell foam poly dielectric and bonded tape conductor all contribute to the superior weather resistance of LMR cables compared to braided cables and 9913.

Is there only one type of LMR® cable, or are there options?

Included in this catalog are the many different types of LMR cables which are available, so you can always be certain that there is an LMR cable just right for your particular application. Besides standard LMR cable, Times offers:

LMR-FR: Fire retardant cable for installation in building vertical risers or where fire retardancy is critical, both UL and CSA listed (CMR/CATVR).

LMR-LLPL: Low loss plenum rated cables for use in virtually any in-building application, including air handling plenums and spaces where maximum fire retardancy and low smoke generation are required. LMR-LLPL cables are the most rugged and easiest to install plenum rated cables available, especially for difficult installs in older buildings. Cables are both UL and CSA listed (CMP/CATVP).

LMR-DB: Watertight cables with an inert flooding compound injected in the braid to completely eliminate the possibility of any water migration- *with a 10 year*

warranty! The DB feature is optional on sizes 600 and smaller, and standard on sizes 900 and larger.

LMR Ultraflex: Stranded center conductor and thermoplastic rubber jacket for maximum flexibility.

LMR-MA: Unbonded tape conductor for ease of removal for special applications.

LMR-PVC: Polyvinylchloride outer jacket for enhanced flexibility.

LMR-lite: Lightweight version of the standard LMR cable. Aluminum braid is used instead of tinned copper braid to offer a lighter weight cable.

FBT: Similar to LMR-LLPL, but with a fluoropolymer (FEP) outer jacket for high temperature performance up to 150°C (302°F).

T-COM: The ultimate in low loss, high performance coax with a triple shielding system pioneered by Times to achieve enhanced shielding and low passive intermod (-155dB).

LMR-75: These are 75 Ohm versions of the standard LMR cable for unsurpassed performance in broadband video and specialized RF applications.

T-RAD: 50 Ohm leaky feeder cable for RF coverage up to 2.5GHz. For use in buildings, mines, tunnels or any enclosed area. Flexible, non-kinking low cost design.

LMR® discussion

What about connectors and installation tools?

Times offers a complete line of connectors for all its cables. A wide variety of connector interfaces is offered for almost every application:

- N
- BNC
- TNC
- UHF
- Reverse polarity
- MUHF
- 716DIN
- SMA
- QDS (quick disconnect)
- F
- LC
- HN
- QMA

Special connectors are available, and Times is always adding new ones. Times also offers a complete line of cable prep and connector installation tools, so you never will be frustrated by not having the right tools- Times is your one-stop source.

Do all Times connectors require soldering?

An extensive line of solder-pin type connectors is offered. However, Times has become the recognized industry leader in developing simplified connectors especially suited for field applications offering more nonsolder type connectors than any other cable manufacturers. The Times well-known line of Advantage™ -X series EZ nonsolder connectors which also do not require braid trimming has become renowned in the industry. With center pin contacts made from silver or gold plated beryllium-copper,

EZ connectors are the preferred choice for quick and reliable field installations.

How can I get cable and tower installation accessories that work with LMR® cable?

Easy- Times furnishes a complete line of site installation hardware and accessories- everything you need to get you from the antenna to the equipment:

- **Ground kits:** Perfectly sized to each LMR cable, with never a chance of the ground strap being too tight (crushed cable), or too loose (poor grounding).
- **Hangers:** Snap-in, butterfly
- **Hoisting grips**
- **Weatherproofing kits:** Tape and cold shrink
- **Tie wraps**
- **Mounting hardware**
- **Entry ports and hardware**

Does anyone else make a cable like LMR®?

Some have tried, but no one can match Times LMR when it comes to what's important to the customer. Some don't even offer anything but cable, while Times offers:

- The most complete line of cable, connectors (including *EZ*), tools and accessories
- The biggest range of sizes
- The most cable type options
- The most extensive distribution network
- Unsurpassed technical support
- The assurance that comes from knowing you are dealing with the industry leader, and
- ***The only company with its phone number printed on every foot of cable we make.*** You never have to guess who to call if you have a question or need help solving a problem, because everything is supplied by Times.

What about price?

In most cases Times LMR cables and connectors will save you money compared to corrugated cable. By combining the lower purchase cost with the ease and speed of installation, excellent savings are achieved. LMR cables also offer significant performance advantages compared to RG type cables at comparable prices.

How about jumpers and cable assemblies?

Times manufactures high quality LMR cable assemblies and Flextech jumpers- 100% factory tested before shipment for insertion loss and VSWR. Many of Times' LMR distributors also supply LMR cable assemblies and provide excellent service, especially for quick delivery requirements.

Where are LMR® cables made?

Times LMR cables are manufactured in our ISO certified Wallingford, Connecticut plant, where we have been making high quality coaxial cable for over 60 years.

What about availability?

Times LMR cables, connectors and accessories are stocked by our vast network of national, regional and international distributors worldwide, so you are never far from a convenient source.

How can I get started using LMR® cables?

Easy- just call our friendly Sales Department at either 1-800-TMS-COAX (1-800-867-2629) or 203-949-8400 and you can also visit our comprehensive web site at www.timesmicrowave.com for product and technical information or to request other Times literature.

I'm new at this and might need help with the connectors or accessories

Times has put together a full complement of “how-to” videos of many of the most popular Advantage™ -X Series EZ connectors as well as ground kits and other accessories. These videos are available both on the Times Microwave Website and YouTube. And if you ever need help on a job, just call us- our phone number is right on the cable.

LMR®-100A
Flexible Low Loss Communications Coax

Ideal for...

- Drop-in Replacement for RG-316/RG-174 (uses standard connectors)
- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable

- **LMR®-PVC** is designed for low loss general-purpose indoor/outdoor applications and is somewhat more flexible than the standard polyethylene jacketed LMR.
- **LMR®-PVC-W** is a white-jacketed version of LMR-PVC for marine and other indoor/outdoor applications where color compatibility is desired.
- **Flexibility** and bendability are hallmarks of the LMR-100A cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-100A. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-100A cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** A wide variety of connectors are available for LMR-100A cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies:** All LMR-100A cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR®-195
Flexible Low Loss Communications Coax
Ideal for...

- Jumper Assemblies in Wireless Communications Systems
 - Short Antenna Feeder runs
 - Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable
 - Drop-in replacement for RG-58 and RG-142
-
- **LMR®** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables.
 - **LMR®-DB** is identical to standard LMR plus has the advantage of being watertight. The addition of waterproofing compound in and around the foil/braid insures continuous reliable service should the jacket be inadvertently damaged during installation or in the future.
 - **LMR®-FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. LMR-FR is UL/NEC & CSA rated ‘CMR’ and ‘FT4’ respectively, meets FAA FAR25 requirements and is MSHA-P for mining applications.
 - **LMR®-FR-PVC** is a general-purpose indoor cable and has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively. It is less expensive than LMR-FR, however it emits toxic fumes (HCL) and greater smoke density when burned.
 - **LMR®-PVC** is designed for low loss general-purpose applications and is somewhat more flexible than the standard polyethylene jacketed LMR.
 - **LMR®-PVC-W** is a white-jacketed version of LMR-PVC for marine and other applications where color compatibility is desired.
 - **LMR®-MA** is a flexible cable designed specifically for mobile antenna applications. It has a PVC jacket and un-bonded aluminum tape to facilitate end stripping with automated equipment.
 - **Flexibility** and bendability are hallmarks of the LMR-195 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
 - **Low Loss** is another hallmark feature of LMR-195. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
 - **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
 - **Weatherability:** LMR-195 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
 - **Connectors:** A wide variety of connectors are available for LMR-195 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
 - **Cable Assemblies:** All LMR-195 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable

- **LMR®** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables.
- **LMR®-DB** is identical to standard LMR plus has the advantage of being watertight. The addition of waterproofing compound in and around the foil/braid insures continuous reliable service should the jacket be inadvertently damaged during installation or in the future.
- **LMR®-FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. LMR-FR is UL/NEC & CSA rated ‘CMR’ and ‘FT4’ respectively, meets FAA FAR25 requirements and is MSHA-P for mining applications.
- **LMR®-FR-PVC** is a general-purpose indoor cable and has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively. It is less expensive than LMR-FR, however it emits toxic fumes (HCL) and greater smoke density when burned.
- **LMR®-PVC** is designed for low loss general-purpose applications and is somewhat more flexible than the standard polyethylene jacketed LMR.
- **LMR®-PVC-W** is a white-jacketed version of LMR-PVC for marine and other applications where color compatibility is desired.
- **LMR®-MA** is a flexible cable designed specifically for mobile antenna applications. It has a PVC jacket and un-bonded aluminum tape to facilitate end stripping with automated equipment.
- **Flexibility** and bendability are hallmarks of the LMR-200 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

- **Low Loss** is another hallmark feature of LMR-200. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-200 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** A wide variety of connectors are available for LMR-200 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies:** All LMR-200 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR[®]-400
Flexible Low Loss Communications Coax

Ideal for...

- Drop-in replacement for RG-8/9913 Air-Dielectric type Cable
- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable
- **NEW!** Times Protect[®] LP-18-400 protector-series

- **LMR[®]** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables.
- **LMR[®]-DB** is identical to standard LMR plus has the advantage of being watertight. The addition of waterproofing compound in and around the foil/braid insures continuous reliable service should the jacket be inadvertently damaged during installation or in the future.
- **LMR[®]-FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. LMR-FR is UL/NEC & CSA rated ‘CMR’ and ‘FT4’ respectively, meets FAA FAR25 requirements and is MSHA-P for mining applications.
- **LMR[®]-FR-PVC** is a general-purpose indoor cable and has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively. It is less expensive than LMR-FR, however it emits toxic fumes (HCL) and greater smoke density when burned.
- **LMR[®]-PVC** is designed for low loss general-purpose applications and is somewhat more flexible than the standard polyethylene jacketed LMR.
- **LMR[®]-PVC-W** is a white-jacketed version of LMR-PVC for marine and other applications where color compatibility is desired.

- **Flexibility** and bendability are hallmarks of the LMR-400 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-400.

- Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
 - **Weatherability:** LMR-400 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
 - **Connectors:** A wide variety of connectors are available for LMR-400 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
 - **Cable Assemblies:** All LMR-400 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Deburr Tool	DBT-U	3192-001	Removes center conductor rough edges
Cutting Tool	CCT-01	3190-1544	Cable end flush cut tool
Replacement Blade	RB-01	3190-1609	Replacement blade for cutting tool
Tool Kit	TK-400EZ	3190-1601	Tool kit for LMR-400 Crimp Connectors (includes CCT-01, CST-400, CT-400/300, Tool Pouch)
Replacement Blade Kit	RB-CST	3192-086	Replacement blade kit for all CST strip tools

LMR[®]-500 Flexible Low Loss Communications Coax

Ideal for...

- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable

- **LMR[®]** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables.
- **LMR[®]-DB** is identical to standard LMR plus has the advantage of being watertight. The addition of waterproofing compound in and around the foil/braid insures continuous reliable service should the jacket be inadvertently damaged during installation or in the future.
- **LMR[®]-FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. LMR-FR is UL/NEC & CSA rated ‘CMR’ and ‘FT4’ respectively, meets FAA FAR25 requirements and is MSHA-P for mining applications.
- **Flexibility** and bendability are hallmarks of the LMR-500 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-500. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-500 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** A wide variety of connectors are available for LMR-500 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies:** All LMR-500 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Part Description				Stock
Part Number	Application	Jacket	Color	Code
LMR-500	Outdoor	PE	Black	54002
LMR-500-DB	Outdoor/Watertight	PE	Black	54092

LMR®-600 Flexible Low Loss Communications Coax

Ideal for...

- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WiSP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable

- **LMR®** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables.
- **LMR®-DB** is identical to standard LMR plus has the advantage of being watertight. The addition of waterproofing compound in and around the foil/braid insures continuous reliable service should the jacket be inadvertently damaged during installation or in the future.
- **LMR®-FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. LMR-FR is UL/NEC & CSA rated ‘CMR’ and ‘FT4’ respectively, meets FAA FAR25 requirements and is MSHA-P for mining applications.
- **LMR®-FR-PVC** is a general-purpose indoor cable and has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively. It is less expensive than LMR-FR, however it emits toxic fumes (HCL) and greater smoke density when burned.
- **LMR®-PVC** is designed for low loss general-purpose applications and is somewhat more flexible than the standard polyethylene jacketed LMR.
- **LMR®-PVC-W** is a white-jacketed version of LMR-PVC for marine and other applications where color compatibility is desired.

- **Flexibility** and bendability are hallmarks of the LMR-600 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-600.

- Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
 - **Weatherability:** LMR-600 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
 - **Connectors:** A wide variety of connectors are available for LMR-600 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
 - **Cable Assemblies:** All LMR-600 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR®-900
Flexible Low Loss Communications Coax

Ideal for...

- Medium Antenna Feeder runs (no jumpers required)
- Jumper Assemblies for 1-5/8” & 2-1/4” Feeders
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable

- **LMR®- DB** is identical to standard LMR plus has the advantage of being watertight. The addition of waterproofing compound in and around the foil/braid insures continuous reliable service should the jacket be inadvertently damaged during installation or in the future.
- **LMR®- FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. LMR-FR is UL/NEC & CSA rated ‘CMR’ and ‘FT4’ respectively, meets FAA FAR25 requirements and is MSHA-P for mining applications.

- **Flexibility** and bendability are hallmarks of the LMR-900 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-900. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).

- **Weatherability:** LMR-900 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** A selection of connectors including type-N, 7/16 DIN, and 7/8 EIA flanges are available for LMR-900. Other interfaces are available on request. Transition to interfaces smaller than type-N is best accomplished with a short jumper cable.
- **Cable Assemblies:** All LMR-900 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR® lite-195
Flexible Low Loss Communications Coax
Ideal for...

- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable
- Drop-in replacement for RG-58 and RG-142

• **LMR-LW195** is a lightweight low loss coaxial cable that employs an aluminum braid shield instead of the traditional tinned copper shield. LMR-LW195 has been designed and engineered with a combination of electrical, physical and mechanical properties that reduce weight and cost.

- **Flexibility** and bendability that are hallmarks of LMR-195 are also the same for LMR-LW195. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-LW195. Size for size LMR® has the lowest loss of any flexible cable and comparable loss to semi rigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-LW195 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** LMR-LW195 uses the same connectors, tools and installation accessories as standard LMR®. A wide variety of connectors are available for LMR-LW195 including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR

connectors employ crimp outer attachment using standard hex crimp sizes.

- **Cable Assemblies:** All LMR-LW195 cable types are available as pre-terminated cable assemblies.

LMR® lite-200
Flexible Low Loss Communications Coax

Ideal for...

- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application (e.g. WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Mobile Antennas) requiring an easily routed, low loss RF cable

• **LMR-LW200** is a lightweight low loss coaxial cable that employs an aluminum braid shield instead of the traditional tinned copper shield. LMR-LW200 has been designed and engineered with a combination of electrical, physical and mechanical properties that reduce weight and cost.

• **Flexibility** and bendability that are hallmarks of LMR-200 are also the same for LMR-LW200. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

• **Low Loss** is another hallmark feature of LMR-LW200. Size for size LMR® has the lowest loss of any flexible cable and comparable loss to semi rigid hard-line cables.

• **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).

• **Weatherability:** LMR-LW200 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.

• **Connectors:** LMR-LW200 uses the same connectors, tools and installation accessories as standard LMR®. A wide variety of connectors are available for LMR-LW200 including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR

connectors employ crimp outer attachment using standard hex crimp sizes.

• **Cable Assemblies:** All LMR-LW200 cable types are available as pre-terminated cable assemblies.

LMR®-240-UF
UltraFlex Communications Coax

Ideal for...

- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs (e.g. WLL, GPS, LMR, Mobile Antennas)
- Any application that requires periodic/repeated flexing

• **LMR® - UltraFlex** has a stranded center conductor and rubber outer jacket designed for multiple bending/flexing cycles. It is used for both indoor and outdoor applications.

• **Flexibility** and bendability are hallmarks of the LMR-240-UF cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

• **Low Loss** is another hallmark feature of LMR-240-UF. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.

• **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).

• **Weatherability:** LMR-240-UF cables are designed for outdoor exposure and have a life expectancy in excess of 10 years.

• **Connectors:** A wide variety of connectors are available for LMR-240-UF cable, including all common interface types, reverse polarity, and solder-on center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.

• **Cable Assemblies:** All LMR-240-UF cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR®-600-UF
UltraFlex Communications Coax

Ideal for...

- Jumper Assemblies in Wireless Communications Systems
- Short Antenna Feeder runs
- Any application that requires periodic/repeated flexing

• **LMR®- UltraFlex** has a stranded center conductor and rubber outer jacket designed for multiple bending/ flexing cycles. It is used for both indoor and outdoor applications.

• **Flexibility** and bendability are hallmarks of the LMR-600-UF cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

• **Low Loss** is another hallmark feature of LMR-600-UF. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.

• **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).

• **Weatherability:** LMR-600-UF cables are designed for outdoor exposure and have a life expectancy in excess of 10 years.

• **Connectors:** A wide variety of connectors are available for LMR-600-UF cable, including all common interface types, reverse polarity, and solder-on center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.

• **Cable Assemblies:** All LMR-600-UF cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR®-195-LLPL
Flexible Low Loss Plenum Coax

Ideal for...

- Indoor Plenum Feeder runs
- Drop in replacement for RG-142
- UL/NEC/CSA rated CMP/FT6
- Any wireless application (e.g. LMDS, MMDS, WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Cellular, PCS, Paging) requiring an easily routed, low loss RF cable for in-building systems

- **LMR®-LLPL** is an indoor highly fire retarded cable intended specifically for runs within return air handling plenums (e.g. dropped ceilings, raised floors). It has a UL/NEC & CSA rating of ‘CMP’ and ‘FT6’ respectively.
- **Flexibility** and bendability are hallmarks of the LMR-195-LLPL cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-195-LLPL. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-195-LLPL cables are designed for indoor Plenum applications. Black jacketed LMR-LLPL versions can be supplied for applications that originate outdoors (e.g., rooftop) and subsequently enter the building.
- **Connectors:** A variety of connectors are available for LMR-195-LLPL cable, including the most common interface types. Most employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies:** All LMR-195-LLPL cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR®-240-LLPL
Flexible Low Loss Plenum Coax

Ideal for...

- Indoor Plenum Feeder runs
- UL/NEC/CSA rated CMP/FT6
- Any wireless application (e.g. LMDS, MMDS, WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Cellular, PCS, Paging) requiring an easily routed, low loss RF cable for in-building systems

- **LMR®-LLPL** is an indoor highly fire retarded cable intended specifically for runs within return air handling plenums (e.g. dropped ceilings, raised floors). It has a UL/NEC & CSA rating of ‘CMP’ and ‘FT6’ respectively.
- **Flexibility** and bendability are hallmarks of the LMR-240-LLPL cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-240-LLPL. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-240-LLPL cables are designed for indoor Plenum applications. Black jacketed LMR-LLPL versions can be supplied for applications that originate outdoors (e.g., rooftop) and subsequently enter the building.
- **Connectors:** A variety of connectors are available for LMR-240-LLPL cable, including the most common interface types. Most employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies:** All LMR-240-LLPL cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Part Description				
Part No.	Application	Jacket	Color	Stock Code
LMR-240-LLPL	Indoor/Outdoor Plenum CMP/FT6	FRPVC	Orange	54059

Construction Specifications			
Description	Material	In.	(mm)
Inner Conductor	Solid Bare Copper	0.051	(1.30)
Dielectric	Low density PTFE	0.150	(3.81)
Outer Conductor	Aluminum Tape	0.155	(3.94)
Overall Braid	Tinned Copper	0.178	(4.52)
Jacket	Orange FRPVC	0.240	(6.10)

Mechanical Specifications			
Performance Property	Units	US	(metric)
Bend Radius: installation	in. (mm)	0.75	(19.1)
Bend Radius: repeated	in. (mm)	2.5	(63.5)
Bending Moment	ft-lb (N-m)	0.25	(0.34)
Weight	lb/ft (kg/m)	0.047	(0.07)
Tensile Strength	lb (kg)	60	(27.22)
Flat Plate Crush	lb/in. (kg/mm)	85	(1.52)

Environmental Specifications		
Performance Property	°F	°C
Installation Temperature Range	+23/+167	-5/+75
Storage Temperature Range	+23/+167	-5/+75
Operating Temperature Range	+23/+167	-5/+75

Electrical Specifications			
Performance Property	Units	US	(metric)
Velocity of Propagation	%	76	
Dielectric Constant	NA	1.73	
Time Delay	nS/ft (nS/m)	1.34	(4.40)
Impedance	ohms	50	
Capacitance	pF/ft (pF/m)	26.7	(87.6)
Inductance	uH/ft (uH/m)	0.067	(0.22)
Shielding Effectiveness	dB	>90	
DC Resistance			
Inner Conductor	ohms/1000ft (/km)	4.0	(13.1)
Outer Conductor	ohms/1000ft (/km)	3.9	(12.8)
Voltage Withstand	Volts DC	1500	
Jacket Spark	Volts RMS	5000	
Peak Power	kW	5.6

Hardware Accessories

Type	Part Number	Stock Code	Description
Ground Kit	GK-S240TT	GK-S240TT	Standard Ground Kit (each)

Install Tools

Type	Part Number	Stock Code	Description
Crimp Tool	CT-240/200/195/100	3190-667	Crimp tool for LMR-100, 195, 200 and 240 connectors
Strip Tool	CST-240	3192-070	Prep tool for LMR-240 connectors
Deburr Tool	DBT-U	3192-001	Removes center conductor rough edges
Cutting Tool	CCT-01	3190-1544	Cable end flush cut tool
Replacement Blade	RB-01	3190-1609	Replacement blade for cutting tool
Replacement Blade Kit	RB-CST	3192-086	Replacement kit for all CST strip tools

LMR®-300-LLPL
Flexible Low Loss Plenum Coax

Ideal for...

- Indoor Plenum Feeder runs
- UL/NEC/CSA rated CMP/FT6
- Any wireless application (e.g. LMDS, MMDS, WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Cellular, PCS, Paging) requiring an easily routed, low loss RF cable for in-building systems

- **LMR®-LLPL** is an indoor highly fire retarded cable intended specifically for runs within return air handling plenums (e.g. dropped ceilings, raised floors). It has a UL/NEC & CSA rating of ‘CMP’ and ‘FT6’ respectively.
- **Flexibility** and bendability are hallmarks of the LMR-300-LLPL cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-300-LLPL. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-300-LLPL cables are designed for indoor Plenum applications. Black jacketed LMR-LLPL versions can be supplied for applications that originate outdoors (e.g., rooftop) and subsequently enter the building.
- **Connectors:** A variety of connectors are available for LMR-300-LLPL cable, including the most common interface types. Most employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies:** All LMR-300-LLPL cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR®-900-LLPL
Flexible Low Loss Plenum Coax

Ideal for...

- Indoor Plenum Feeder runs
- UL/NEC/CSA rated CMP/FT6
- Any wireless application (e.g. LMDS, MMDS, WLL, GPS, LMR, WLAN, WISP, WiMax, SCADA, Cellular, PCS, Paging) requiring an easily routed, low loss RF cable for in-building systems

- **LMR®-LLPL** is an indoor highly fire retarded cable intended specifically for runs within return air handling plenums (e.g. dropped ceilings, raised floors). It has a UL/NEC & CSA rating of ‘CMP’ and ‘FT6’ respectively.
- **Flexibility** and bendability are hallmarks of the LMR-900-LLPL cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of LMR-900-LLPL. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** LMR-900-LLPL cables are designed for indoor Plenum applications. Black jacketed LMR-LLPL versions can be supplied for applications that originate outdoors (e.g., rooftop) and subsequently enter the building.

- **Connectors:** Type-N and 7-16 male and female connectors are available for LMR-900-LLPL cable. Other interface types can be provided by using a short jumper cable assembly.
- **Cable Assemblies:** All LMR-900-LLPL cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

LMR[®]-200-75 Ohm Flexible Low Loss Coaxial Cable

Ideal for...

- Satellite Applications
- Video Applications-CCTV, CATV, baseband or broadband
- In-Building Feeder Runs
- Any 75 ohm Wireless Application requiring an easily routed,

• **LMR[®]-75** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than any smooth wall or corrugated hard-line cables.

• **Flexibility** and bendability are hallmarks of the LMR-200-75 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

• **Low Loss** is another hallmark feature of LMR-200-75. Size for size LMR-75 has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.

• **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).

• **Weatherability:** LMR-200-75 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.

• **Connectors:** Standard available connectors include type-N and type-F male plug with 75 ohm interface. Most LMR-75 connectors are the EZ install type with crimp outer and non-solder center contact attachment.

• **Cable Assemblies:** All LMR-200-75 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Attenuation vs. Frequency (typical)

Frequency (MHz)	30	50	150	220	450	900	1500	1800	2000	2500
Attenuation dB/100 ft	1.3	1.6	2.9	3.5	5.0	7.2	9.4	10.3	10.9	12.3
Attenuation dB/100 m	4.1	5.4	9.4	11.4	16.4	23.5	30.7	33.8	35.8	40.3
Avg. Power kW	1.41	1.09	0.62	0.51	0.35	0.25	0.19	0.17	0.16	0.14

Calculate Attenuation =
(0.229100) • √FMHz + (0.000330) • FMHz (interactive calculator available at http://www.timesmicrowave.com/cable_calculators)

Attenuation:
VSWR=1.0 ; Ambient = +25°C (77°F)

Power:
VSWR=1.0; Ambient = +40°C; Inner Conductor = 100°C (212°F); Sea Level; dry air; atmospheric pressure; no solar loading

Connectors

TCOM®-195
Low Loss Low Passive Intermod Coax

Ideal for...

- -155 dBc Intermodulation Distortion
- Low Loss UHF/Microwave Interconnect
- Wireless Base Station Interconnect
- Flexible for Easy Routing

• **TCOM®** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than any air-dielectric and corrugated hard-line cables. **TCOM®-FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. TCOM-FR has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively.

Flexibility and bendability are hallmarks of the TCOM-195 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

Low Loss is another hallmark feature of TCOM-195. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.

Passive Intermod is lower than –155 dBc exceed the performance levels for most wireless applications.

RF Shielding is 60 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 100 dB (i.e. >200 dB between two adjacent cables).

Weatherability: TCOM-195 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.

Connectors: A wide variety of connectors are available for TCOM-195 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.

Cable Assemblies: All TCOM-195 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Crimp Tool	CT-240/200/195/100	3190-667	Crimp tool for LMR-100, 195, 200and 240 connectors
Deburr Tool	DBT-U	3192-001	Removes center conductor rough edges
Cutting Tool	CCT-01	3190-1544	Cable end flush cut tool
Replacement Blade	RB-01	3190-1609	Replacement blade for cutting tool
Strip Tool	CST-195/200	3192-102	Combination prep tool for LMR-195 and LMR-200
Replacement Blade Kit	RB-CST	3192-086	Replacement blade kit for all strip tools

TCOM®-200
Low Loss Low Passive Intermod Coax

Ideal for...

- -155 dBc Intermodulation Distortion
- Low Loss UHF/Microwave Interconnect
- Wireless Base Station Interconnect
- Flexible for Easy Routing

• **TCOM®** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables.

TCOM® - FR is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. TCOM-FR has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively.

Flexibility and bendability are hallmarks of the TCOM-200 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

Low Loss is another hallmark feature of TCOM-200. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.

Passive Intermod is lower than –155 dBc exceed the performance levels for most wireless applications.

RF Shielding is 60 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 100 dB (i.e. >200 dB between two adjacent cables).

Weatherability: TCOM-200 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.

Connectors: A wide variety of connectors are available for TCOM-200 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.

Cable Assemblies: All TCOM-200 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

TCOM®-400
Low Loss Low Passive Intermod Coax

Ideal for...

- -155 dBc Intermodulation Distortion
- Low Loss UHF/Microwave Interconnect
- Wireless Base Station Interconnect
- Flexible for Easy Routing

• **TCOM®** standard is a UV Resistant Polyethylene jacketed cable designed for 20-year service outdoor use. The bending and handling characteristics are significantly better than air-dielectric and corrugated hard-line cables. **TCOM® - FR** is a non-halogen (non-toxic), low smoke, fire retardant cable designed for in-building runs that can be routed anywhere except air handling plenums. TCOM-FR has a UL/NEC & CSA rating of ‘CMR’ and ‘FT4’ respectively.

TCOM® - PUR has a polyurethane outer jacket designed for multiple bending/flexing cycles in rugged tactical applications.

Flexibility and bendability are hallmarks of the TCOM-400 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.

Low Loss is another hallmark feature of TCOM-400. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.

Passive Intermod is lower than –155 dBc exceed the performance levels for most wireless applications.

RF Shielding is 60 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 100 dB (i.e. >200 dB between two adjacent cables).

Weatherability: TCOM-400 cables designed for outdoor exposure incorporate the best materials for UV resistance and have life expectancy in excess of 20 years.

Connectors: A wide variety of connectors are available for TCOM-400 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.

Cable Assemblies: All TCOM-400 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Hardware Accessories

Mini Coax Support Blocks				
	<i>Neatly stack coax into space saving bundles. Lower material cost by reducing hardware requirements.</i>	Application:	Coax Support	
		Size:	1/2" to 1-1/4" coax	
		Design:	Two-run block hangers	
		Feature:	Compact coax bundles	
		Mounts to:	3/8" or 10mm threaded rod	
		Material:	Long glass polypropylene	
		Includes:	Blocks only	
		Order Sep.:	3/8" or 10mm mounting hardware kits	
		TMS part no.	Quant/pkg.	Weight lb (kg)
	Mini coax support block for LMR-600	CB-600T	10	1.2 (0.5)
	Mini coax support block for LMR-900	CB-900T	10	1.2 (0.5)
	Mini coax support block for LMR-1200	CB-1200T	10	1.2 (0.5)
	Mini coax support block for LMR-1700 coax	CB-1700T	10	1.7 (0.8)
Mounting Hardware Kits for Coax Support Blocks and Hanger Clamps				
	<i>Pre-cut galvanized threaded rod hardware kits for stacking and installing mini coax support blocks.</i>	Application:	Coax Support	
		Size:	3/8"	
		Design:	1, 2, and 3-stack threaded rod kits	
		Feature:	Stacks coax blocks	
		Mounts to:	—	
		Material:	Galv. (3/8") or stainless steel (10mm)	
		Includes:	Threaded rod and hardware	
		Order Sep.:	Additional accessories	
		TMS part no.	Quant/pkg.	Weight lb (kg)
	Hardware kit for LMR-600, 900, 1200 support blocks	HK-SSCB	10	1.8 (0.8)
	Hardware kit for LMR-1700 support blocks	HK-SSCB-158	10	1.9 (0.9)
	Hardware kit for mounting (2) mini coax support blocks for LMR-600, 900, 1200	HK-DSCB	10	2.3 (1.0)
	Hardware kit for mounting (2) mini coax support blocks for LMR-1700	HK-DSCB-158	10	2.5 (1.1)
	Hardware kit for mounting (3) mini coax support blocks for LMR-600, 900, 1200	HK-TSCB	10	2.8 (1.3)
	Hardware kit for mounting (3) mini coax support blocks for LMR-1700	HK-TSCB-158	10	3.2 (1.5)
Adapter Bracket				
	<i>Support coax blocks in wall mount applications.</i>	Application:	Coax Support	
		Size:	7/16" (11.1mm) holes	
		Design:	Adapts hangers to flat surfaces	
		Feature:	Compact design	
		Mounts to:	—	
		Material:	Stainless steel	
		Includes:	Bracket	
		Order Sep.:	Additional accessories	
		TMS part no.	Quant/pkg.	Weight lb (kg)
	Adaptor bracket	AB-CB	10	4.6 (2.1)
Stainless Steel Adapter Bracket				
	<i>Adapt angled members for securing coax cables. Unique design easily converts to accommodate snap-in hangers.</i>	Application:	Coax Support	
		Size:	7/16" (11.1mm) holes	
		Design:	Adapts hangers to flat surfaces	
		Feature:	Fits any bolt-on hanger style	
		Mounts to:	—	
		Material:	Hot dip galv. steel,	
		Includes:	Bracket	
		Order Sep.:	Additional accessories	
		TMS part no.	Quant/pkg.	Weight lb (kg)
	Universal SST angle adapter	AB-CBH	1	2.3 (1.0)

Butterfly Hangers

Butterfly hangers for standard non-snap-in installations.

Application:	Coax Support
Size:	see chart
Design:	Bolt-on single run hanger
Feature:	Traditional hanger solution
Mounts to:	7/16" (11.1mm) prepunched hole
Material:	Stainless steel
Includes:	Hangers and set bolts
Order Sep.:	Hanger hardware kits & additional accessories
Note: Hanger hardware kit not included; order separately	

	TMS part no.	Quant/pkg.	Weight lb (kg)
Butterfly hanger for LMR-400	BH-S38 NH	10	1.0 (0.5)
Butterfly hanger for LMR-600	BH-12 NH	10	1.0 (0.5)
Butterfly hanger for LMR-900	BH-58 NH	10	1.1 (0.5)
Butterfly hanger for LMR-1200	BH-78 NH	10	1.1 (0.5)
Butterfly hanger for LMR-1700	BH-114 NH	10	1.4 (0.6)

Standard Hangers

Standard hanger for reduced installation time

App.: Coax Support
 Size: See chart
 Design: Pre-formed bolt-on single run hanger
 Feature: Reduced installation time
 Mounts to: 7/16" (11.1mm) prepunched hole
 Material: Stainless steel
 Includes: Hangers and set bolts
 Order Sep.: Hanger hardware kits & additional accessories
 Note: Hanger hardware kit not included; order separately

	TMS part no.	Quant/pkg.	Weight lb	(kg)
Standard hanger for LMR-400	BH-S38 NH	10	0.8	(0.4)
Standard hanger for LMR-600	BH-S12 NH	10	0.8	(0.4)
Standard hanger for LMR-1200	BH-S78 NH	10	1.8	(0.8)
Standard hanger for LMR-1700	BH-S114 NH	10	1.1	(0.5)

Clip Hangers

	<i>Easy install solution</i>	Application:	Coax Support			
		Size:	See chart			
		Design:	Clip-on single run hanger			
		Feature:	Easy-to-install solution			
		Mounts to:	7/16" (11.1mm) prepunched hole			
		Material:	Stainless steel			
		Includes:	Hangers and set bolts			
		Order Sep.:	Hanger hardware kits and additional accessories			
		Note: Hanger hardware kit not included; order separately				
			TMS part no.	Quant/pkg.	Weight lb	(kg)
Clip hanger kit for LMR-600	CH-12 NH	10	0.8	(0.4)		
Clip hanger kit for LMR-1200	CH-78 NH	10	0.8	(0.4)		
Clip hanger kit for LMR-1700	CH-114 NH	10	1.1	(0.5)		

Universal Snap-in Hangers

	<i>Snap-in hangers simplify coax installation by eliminating the need for mounting hardware and installation tools.</i>	Application:	Coax Support		
		Size:	See chart		
		Design:	One-piece hanger solution		
		Feature:	Simplifies coax installation		
		Mounts to:	3/4" (19.1mm) holes		
		Material:	Stainless steel		
		Includes:	Hangers		
		Order Sep.:	Additional mounting accessories		
		TMS part no.	Quant/pkg.	Weight lb (kg)	
		Universal snap-in hanger for LMR-600	SH-U600T	10	0.7 (0.3)
		Universal snap-in hanger for LMR-900	SH-U900T	10	1.0 (0.5)
		Universal snap-in hanger for LMR-1200	SH-U1200T	10	1.2 (0.5)
		Universal snap-in hanger for LMR-1700	SH-U1700T	10	1.3 (0.6)

Hardware Accessories

Hanger Hardware Kits						
	<i>Standard, clip and butterfly for flange attachment.</i>	Application:	Coax Support			
		Size:	3/8" or 10mm			
		Design:	Hardware kit for hanger attachment to member			
		Feature:	—			
		Mounts to:	—			
		Material:	Stainless steel			
		Includes:	Bolts, nuts, lockwashers			
		Order Sep.:	Hangers	TMS part no.	Quant/pkg.	Weight lb (kg)
		Hanger hardware kit, 3/8" x 3/4" slotted hex head bolts, lock washers and hex nuts		HK-34-10	10	0.5 (0.2)
		Hanger hardware kit, 3/8" x 1" slotted head bolts lock washers and hex nuts		HK-100-10	10	0.6 (0.3)
		Hanger hardware kit, 10mm x 20mm slotted head bolts lock washers and hex nuts		HK-M1020-10	10	0.5 (0.2)
Universal Angle Adapters						
	<i>Adapt angled members for securing coax hangers.</i>	Application:	Coax Support			
		Size:	3/4" (19.1mm) holes w/ 3/8" tapped insert			
		Design:	Adapts hangers to angle members			
		Feature:	Accepts snap-ins or 3/8" hardware			
		Mounts to:	Up to 7/8" (22mm) angle members			
		Material:	Stainless steel			
		Includes:	Adapters, set bolt, hanger hardware kit, avail. w/ or wo insert			
		Order Sep.:	Hangers	TMS part no.	Quant/pkg.	Weight lb (kg)
		Universal angle adapter for snap-ins or 3/8" tapped holes		AA-U	10	4.9 (2.2)
		Angle adapter, large version, with 3/8" threaded hardware		AA-US	10	4.7 (2.1)
Angle Adapters						
	<i>Adapt angled members for securing coax hangers using 3/8" threaded hardware.</i>	Application:	Coax Support			
		Size:	3/8" tapped holes			
		Design:	Adapts hangers to angle members			
		Feature:	High strength solution			
		Mounts to:	Up to 7/8" (22mm) angle members			
		Material:	Stainless steel			
		Includes:	Adapters, set bolt, hanger hardware kit			
		Order Sep.:	Hangers	TMS part no.	Quant/pkg.	Weight lb (kg)
		Angle adapter with 3/8" tapped holes		AA-SL	10	5.4 (2.5)
		Angle adapter with 10 mm tapped holes		AA-SL-M10	10	5.4 (2.5)
Stand-Off Adapters						
	<i>Adapt and stand coax off 2" from round members. Unique design easily converts to accommodate snap-in hangers. Round member adapters included unless noted.</i>	Application:	Coax Support			
		Size:	3/8" or 10mm tapped hole			
		Design:	Adapts hangers to round members			
		Feature:	Provides 2" (50.8mm) stand-off			
		Mounts to:	Versions for 1" to 6" (25.4mm to 152.4mm) OD			
		Material:	Stainless steel			
		Includes:	Stand-offs, avail. w. or w.o. hose clamps			
		Order Sep.:	Hangers	TMS part no.	Quant/pkg.	Weight lb (kg)
		Universal SST stand-off adapter *		SA-38S	10	3.8 (1.7)
		Universal SST stand-off adapter for 1"-2" OD members**		SA-38S100	10	3.8 (1.7)
		Universal SST stand-off adapter for 2"-3" OD members**		SA-38S200	10	3.8 (1.7)
		Universal SST stand-off adapter for 3"-4" OD members**		SA-38S300	10	4.0 (1.8)
		Universal SST stand-off adapter for 4"-5" OD members**		SA-38S400	10	4.1 (1.9)
		Universal SST stand-off adapter for 5"-6" OD members**		SA-38S500	10	4.4 (2.0)

* Round member adapters not included **Round adapter included

Snap-In Stand-Off Adapters						
	<i>Adapt and stand coax off 2" from round members to avoid obstructions such as tower leg flanges and cross members</i>	Application:	Coax Support			
		Size:	3/4" (19.1mm) hole			
		Design:	Adapts hangers to round members			
		Feature:	Accepts snap-ins			
		Mounts to:	Versions for 1" to 6" (25.4mm to 152.4mm) OD			
		Material:	Stainless steel			
		Includes:	Stand-offs, avail. with or without hose clamps			
		Order Sep.:	Snap-ins			
				TMS part no.	Quant/pkg.	Weight lb (kg)
		Snap-In Stand-Off Adapter *		SA-SS	10	2.9 (1.3)
Snap-In Stand-Off Adapter for 1-2" (25.4mm-50.8mm) OD members**		SA-SS100	10	3.8 (1.7)		
Snap-In Stand-Off Adapter for 2-3" (50.8mm-76.2mm) OD members**		SA-SS200	10	3.9 (1.8)		
Snap-In Stand-Off Adapter for 3-4" (76.2mm-101.6mm) OD members**		SA-SS300	10	4.0 (1.8)		
Snap-In Stand-Off Adapter for 4-5" (101.6mm-127.0mm) OD members**		SA-SS400	10	4.1 (1.9)		
Snap-In Stand-Off Adapter for 5-6" (127.0mm-152.4mm) OD members**		SA-SS500	10	4.1 (1.9)		
* Round member adapters must be purchased separately **Round member adapter included						
Mini Cluster Support Bracket						
	<i>Mini Cluster bracket provides compact mounting support for a variety of different hanger types</i>	Application:	Coax Support			
		Size:	3/4" (19.1mm) and 7/16" (11.1mm) holes			
		Design:	Three-run cluster bracket			
		Feature:	Compact mounting solution			
		Mounts to:	—			
		Material:	Hot dip galv. steel			
		Includes:	Bracket			
		Order Sep.:	Hangers, mounting hardware			
				TMS part no.	Quant/pkg.	Weight lb (kg)
		Mini Cluster Support Bracket		CS-BS	10	4.4 (2.0)
Round Member Adapters						
	<i>Adapt round members when securing most hanger styles.</i>	Application:	Coax Support			
		Size:	3/4" (19.1mm) and 7/16" (11.1mm) holes			
		Design:	Three-run cluster bracket			
		Feature:	Compact mounting solution			
		Mounts to:	—			
		Material:	Hot dip galvanized steel			
		Includes:	Bracket			
		Order Sep.:	Hangers, mounting hardware

Lace-up Hoisting Grips							
	<i>Hoisting Grips provide an effective method for lifting coax cables to the top of a tower where it is tied off to support the cable weight</i>	Application:	Coax Support				
		Size:	Versions for coax and elliptical waveguide				
		Design:	Mesh grip with single eye support				
		Feature:	Lace-up installation at any point on coax				
		Mounts to:	—				
		Material:	Tinned bronze				
		Includes:	Grip				
		Order Sep.:	—				
		*LMR-400 Grip is non-lace-up		TMS part no.	Quant/pkg.	Weight lb	(kg)
		Hoisting Grip for LMR-400 Coaxial Cable*		HG-400T	1	0.3	(1.0)
Lace-up Hoisting Grip for LMR-600 Coaxial Cable		HG-600T	1	0.3	(1.0)		
Lace-up Hoisting Grip for LMR-900 Coaxial Cable		HG-900T	1	0.4	(0.2)		
Lace-up Hoisting Grip for LMR-1200 Coaxial Cable		HG-1200T	1	0.6	(0.3)		
Lace-up Hoisting Grip for LMR-1700 Coaxial Cable		HG-1700T	1	0.6	(0.3)		
Universal Weatherproofing Kits							
	<i>Mastic and electrical tape kit facilitates easy installation and provides a long-term environmental seal for connections.</i>	Application:	Coax Protection				
		Size:	—				
		Design:	Tape kit for multi-layer wrap				
		Feature:	Multi-connection protection				
		Mounts to:	—				
		Material:	Butyl and vinyl				
		WK-U					
		Includes:	Six (6) rolls mastic, 2-1/2" x 24" (64mm x 610mm) Two (2) rolls electrical tape, 3/4" x 66' (19mm x 20m) One (1) roll electrical tape, 2" x 20' (51mm x 6m)

Engineered Products

FBT® Flexible Low Loss High Power Cable: FBT® is a flexible low loss indoor/outdoor highly fire retardant cable suitable for use up to 150°C. Intended specifically for runs within and between base station cabinets, it can also be used in return air handling plenums or outdoors.

FlexTech™ Commercial Cable Assemblies: The use of higher frequencies for telecommunications applications has placed increasingly rigorous demands on cable assembly performance. Our 50 year plus background in military microwave assemblies has provided us the expertise to address these performance requirements, while our commercial expertise allows us to provide economical solutions. FlexTech™ jumper assemblies furnished standard with LMR-DB cable provide rugged dependability for any application.

T-RAD™ 50 Ohm Leaky Feeder Cable: T-RAD™ leaky feeder cables offer a cost effective solution to providing RF coverage in enclosed areas. The flexibility of the cable combined with quick attachment connectors, allows the cable to be easily installed, which is ideal for in-building applications.

SilverLine™: SilverLine™ Test Cables are cost effective, durable, high-performance cable assemblies designed for use in a broad range of test and interconnect applications. Fabricated from rugged, solid PTFE dielectric cable with stainless steel connectors and a proven strain relief system, these cables provide long life and excellent stability in applications where they are repeatedly flexed and mated/unmated. They are ideal for use in production, field and laboratory test environments. They are also economical enough to be used as interconnects in test systems.

LMR Bundled Cable: By bundling LMR® cables together under a common polyethylene outer jacket, this innovative design is the perfect solution for Smart Antenna and other sector applications. LMR® Bundled Cable greatly reduces the cost of installation by slashing the cost of labor and accessories compared to an installation using individual runs. LMR® Bundled Cable is supplied as a complete system, including weather seal breakout boots and ground kits with full technical support and custom tools, pictorial instructions and installation videos.

Certified Installer Training Program

The LMR® Certified Installer Training Program covers all installation aspects of LMR coaxial transmission line cables, connectors and components, including grounding. Topics covered include:

- Coaxial cable fundamentals: characteristics, attenuation, return loss
- LMR coaxial cable designs, features and benefits
- Connectors
 - Various interfaces
 - EZ (non-solder) vs. TC (solder style) of center conductor attachment
 - Clamp vs. crimp style connector attachments
 - Impedance uniformity
 - Other characteristics
- Connector termination demonstrations (EZ and TC), using prep and installation tools on LMR-240, 400, 600 and 900 connectors and cables
- Attendee connector terminations
 - EZ-400-NMH-X (3190-2590)
 - EZ-400-NMH-RA-X (3190-2638)

- EZ-600-NMC-2 (3190-2641)
- EZ-900-NMC-2 (3190-1262)
- Attendees work with a full set of LMR tools and test assemblies they build for attenuation and return loss, using a hand held field analyzer
- Ground kit and weather sealing demonstrations
- SilverLine, QMA and TuffGrip demonstrations
- Radiating cable demonstrations
- LMR bundled cable with end cap and ground kit demonstrations

This one day program is available to groups of 10 or more and can be arranged through any Times distributor. It can be held at a location convenient to the group, at the Times Microwave location in Wallingford, Connecticut or at a participating Times distribution partner location. Attendees receive a certificate as a trained LMR installer. Contact your local Times representative for details.

CITP	Certified Installer Training Program

Engineered Products:

FBT™ -195
Flexible Low Loss High Power Communications Coax
Ideal for...

- High Power Base Station Jumper Assemblies
- In-Building Plenum Feeder Runs
- Any High Power Low Loss RF cable application

- **FBT™** is an indoor/outdoor highly fire retardant cable intended specifically for runs within and between base station cabinets. It is also applicable for return air handling plenums (e.g., dropped ceilings, raised floors). It has a UL/NEC rating of ‘CL2P’ for plenum applications.
- **Flexibility** and bendability are hallmarks of the FBT-195 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of FBT-195. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** FBT-195 cables designed for outdoor exposure incorporate FEP jackets for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** A wide variety of connectors are available for FBT-195 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies** – All FBT-195 cable types are available as pre-terminated cable assemblies. Refer the section on FlexTech for further details.

FBT™-240
Flexible Low Loss High Power Communications Coax

Ideal for...

- High Power Base Station Jumper Assemblies
- In-Building Plenum Feeder Runs
- Any High Power Low Loss RF cable application

- **FBT™** is an indoor/outdoor highly fire retardant cable intended specifically for runs within and between base station cabinets. It is also applicable for return air handling plenums (e.g., dropped ceilings, raised floors). It has a UL/NEC rating of ‘CL2P’ for plenum applications.
- **Flexibility** and bendability are hallmarks of the FBT-240 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of FBT-240. Size for size LMR has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** FBT-240 cables designed for outdoor exposure incorporate FEP jackets for UV resistance and have life expectancy in excess of 20 years.

- **Connectors:** A wide variety of connectors are available for FBT-240 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most LMR connectors employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies** – All FBT-240 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Crimp Dies	Y151	3190-465	.532" Hex Dies
Deburr Tool	DBT-U	3192-001	Removes center conductor rough edges
Cutting Tool	CCT-01	3190-1544	Cable end flush cut tool
Replacement Blade	RB-01	3190-1609	Replacement blade for cutting tool

Engineered Products:

FBT™-600
Flexible Low Loss High Power Communications Coax

Ideal for...

- High Power Base Station Jumper Assemblies
- In-Building Plenum Feeder Runs
- Any High Power Low Loss RF cable application

- **FBT™** is an indoor/outdoor highly fire retardant cable intended specifically for runs within and between base station cabinets. It is also applicable for return air handling plenums (e.g., dropped ceilings, raised floors). It has a UL/NEC & CSA rating of ‘CL2P’ and ‘FT6’ respectively.
- **Flexibility** and bendability are hallmarks of the FBT-600 cable design. The flexible outer conductor enables the tightest bend radius available for any cable of similar size and performance.
- **Low Loss** is another hallmark feature of FBT-600. Size for size FBT has the lowest loss of any flexible cable and comparable loss to semirigid hard-line cables.
- **RF Shielding** is 50 dB greater than typical single shielded coax (40 dB). The multi-ply bonded foil outer conductor is rated conservatively at > 90 dB (i.e. >180 dB between two adjacent cables).
- **Weatherability:** FBT-600 cables designed for outdoor exposure incorporate FEP jackets for UV resistance and have life expectancy in excess of 20 years.
- **Connectors:** A wide variety of connectors are available for FBT-600 cable, including all common interface types, reverse polarity, and a choice of solder or non-solder center pins. Most FBT connectors employ crimp outer attachment using standard hex crimp sizes.
- **Cable Assemblies** – All FBT-600 cable types are available as pre-terminated cable assemblies. Refer to the section on FlexTech for further details.

Engineered Products:
FlexTech™ Commercial Cable Assemblies

Performance:

The use of higher frequencies for telecommunications applications has placed increasingly rigorous demands on cable assembly performance. Our 50 year plus background in military microwave assemblies has provided us the expertise to address these performance requirements, while our commercial expertise allows us to provide economical solutions.

Testing:

- VSWR or Return Loss
- Insertion Loss
- Time Delay
- Absolute or Relative Phase Matching
- Phase Trimming

Value Added

- Variety of Strain Relief Boots
- Multitude of Labeling Possibilities
- Bar Coding
- Customized Packaging

Connector Specifications: *FlexTech™* cable assemblies can be furnished with virtually any connector interface.

Cable Specifications: *FlexTech™* jumper assemblies are furnished standard with LMR-DB cable unless otherwise requested. Cable performance characteristics are listed in the section for each individual cable size. The following table summarizes the characteristics of general interest.

Cable Type	LMR-400	LMR-600	LMR-900
Diameter	.405"	.590"	.870"
Impedance	50 Ohms		
Bend Radius	1"	1-1/2"	3"
Weight(lbs/ft)	.068	.131	.266
Temperature	-40°C to +85°C

Specialized WLAN Assemblies

Competitively Priced

The cable assembly list below has been developed to provide a quick cross reference to a Times Microwave Systems part number for some of the more common configurations being used for WLAN applications. Any of these assemblies ordered by the TMS part number in the right hand column will be 100% tested for IL and VSWR in the relevant brand.

T-RAD Connector installation procedure

LMR-600 crimp connectors can be used on T-RAD-600 cables with special TR-600 crimp rings (stock code 3192-038).

NOTE: TR-600 crimp rings must be purchased separately

Step 1: Flush cut the cable squarely

Step2: Slide the heat shrink and TR-600 crimp ring over the cable. Use a knife or razor to cut a 0.250" long ring from the end of the cable. Make sure that the cut is square.

Step 3: Lightly score the circumference of the cable 0.20" back from the end of the core. Make one long longitudinal cut. Pry up a piece of the jacket and gently peel the ring of the jacket off the core.

Step 4: Debur the center conductor using the DBT 01 deburring tool

Step 5: Slide the connector over the end of the core and push it up to the end of the jacket. Rotate the connection back and forth in a clockwise-counter clockwise motion in reference to the axis of the cable until the back of the connector works its way under the end of the jacket. Now push the connector onto the cable with some back and forth motion until it stops.

NOTE: A small longitudinal cut of 1/4" may be made to the outer jacket to assist with the connector body sliding under the outer jacket.

Step 6: Position the heavy duty HX-4 crimp tool, with the appropriate dies (stock code 3190-203), directly behind and adjacent to the connector body, and crimp the connector. The crimp tool automatically releases when the crimp is complete

Step 7: Position the heat shrink boot as far forward on the connector body as possible without interfering with the coupling nut; use a heat gun to form a weather-tight seal.

Special Crimp Ring

* Finish metals: N=Nickel, S=Silver, G=Gold, SS=Stainless Steel, A=Alballoy **VSWR spec based on 3 foot cable with a connector pair
NOTE: Clamp drain wire for connector attachment. A heavy duty adhesive lined shrink boot is recommended to attach over the connector body and cable jacket

Engineered Products:

SilverLine™

Test Cables

ISO 9001 Certified

Coax Test Cables for:

- High Volume Production Test Stations
- Research & Development Labs
- Environmental & Temperature Test Chambers
- Replacement for OEM Test Port Cables
- Field RF Testing
- Cellular Infrastructure Site Testing

SilverLine™ Test Cables are cost effective, durable, high-performance cable assemblies designed for use in a broad range of test and interconnect applications. Fabricated from rugged, solid PTFE dielectric cable with stainless steel connectors and a proven strain relief system, these cables provide long life and excellent stability in applications where they are repeatedly flexed and mated/unmated. SilverLine™ test cables are ideal for use in production, field and laboratory test environments. They are also economical enough to be used as interconnects in test systems.

Features & Benefits:

- Phase & Loss Stable
- Long Flex Life
- Triple Shielded Cable
- High Mating Cycle, Stainless Steel Connectors
- Rugged, Solder-Clamp Attachment
- Redundant, Long Life Strain Relief System
- ROHS Compliant

Time's Silverline™ Product Guarantee

Times will repair or replace your SilverLine test cable at its option if the connector attachment fails within four months of shipment. This guarantee excludes cable or connector interface damage from misuse or abuse.

Engineered Products:

SilverLine™

Cable Construction

- Inner Conductor: Solid Silver Plated Copper Clad Steel
- Dielectric: Solid PTFE
- Shield: Silver-Plated Copper Flat Ribbon Braid Aluminum-Polyimide Tape Interlayer 36 GA Silver-Plated Copper Braid (90%k)
- Jacket: Clear FEP
- Armor (Optional):
- PVC Style: Steel wire reinforced, thick wall, high flex life clear PVC
- Steel Style: 100% coverage, square locked, galvanized steel hose, high angle steel braid and TPR jacket.

Connectors

- Passivated stainless steel finish (QMA right angle and QMA straight coupling nut only are nickel plated brass)
- QMA SureGrip™ coupling nut design
- Captive contact
- Thick wall interface (SMA)
- Gold plated beryllium copper center contacts
- PTFE dielectric
- Type N & SMA OneTurn™ (1 full rotation to mate)
- High temperature 7mm
- Knurl/hex coupling nut (Type N and TNC)
- Precision grade 7-16

Connector Attachment/Strain Relief

- Rugged, solder-clamp to braid, 175-300 lb pull force. Additional crimp system on armored version.
- Redundant triple layer strain relief system (Dual layer on armored version)

SilverLine™

SilverLine™-QMA Performance Characteristics

QMA Plug Permanently Installed

NEW! 18GHz QMA r/a
with Quick Release

Specifications:

- Frequency Response: DC-18.0 GHz
- VSWR: 1:35:1 Maximum, 1:25:1 Typical

Features & Benefits:

- High Frequency Operation
- 5000 Mate Life
- SureGrip™ Coupling Nut
- Smooth, Fast Retraction for Quick Changes

Notes:

SilverLine-LP™ (Low-PIM)

ISO 9001 Certified

Passive Intermodulation Testing

- Cellular Site Certification
- Troubleshooting
- Performance Analysis
- Antenna or Radio Component Production Test

Features and Benefits

- Much easier to handle than raw corrugated cable
- Better than -117dbm (-160dbc) Performance*
- Includes a set of low PIM adaptors
- Low attenuation
- Rugged, durable, steel armored design
- Retractable, OneTurn™ connector for fast-on fast-off mating
- European and US Hex sizes all in one
- Water resistant
- RoHS compliant

SilverLine™-LP is another first from Times Microwave. There now exists a cable assembly specifically designed for low passive intermodulation performance and to withstand the physical abuse of field testing.

SilverLine™-LP works well with both the latest generation of portable field PIM analyzers and traditional bench top models. A field or production test technician need no longer struggle with bare corrugated cable as a temporary test lead only to have it kink, crack and fail repeatedly, requiring a steady supply of replacements.

SilverLine™-LP incorporates the very best of Times' field proven cable assembly technology, TuffGrip™ armor design and a revolutionary new concept in connector attachment that makes connector/cable junction failures a thing of the past.

The SilverLine™-LP manufacturing process has been tailored to achieve low, consistent PIM performance and user friendliness! As an added value every low PIM assembly comes complete with a set of three Times low pim adaptors to suit all installation test needs.

*Cable at rest

SilverLine-LP Specifications:

Cable Construction
Inner Conductor: Copper clad aluminum
Dielectric: Foam PE
Shield: Copper
Armor: Full, 100% non-interleaved spiral steel sheath overlaid with steel, opposing force structure for torque resistance. Waterproof, UV and abrasion resistant, black TPE outer jacket.

- Connectors**
- Body: Tri-metal plated brass
 - Shell: Aluminum
 - Waterproof
 - Accommodates US and European hex sizes
 - OneTurn™ feature for fast-on fast-off mating

Connector Attachment
Fully soldered center contact and shield. Attachment includes a three inch long, ribbed, wedge clamp-to-armor for the strongest most robust retention system in the industry.

*Achieving mating life with brass requires interfaces to be clean at all times. Remove dust, dirt and especially any metal particles after every mate cycle using a lint free cotton swab and/or dry compressed air. Damage to connector interface voids the warranty. Protect connector interface at all times by replacing protective caps when not in use.

**Proper torque (21 ft/lbs) and cleanliness are mandatory (see note above for cleaning). PIM value will vary within approx -117 dbm to 125 dbm even with cable at rest. Loosen then re-torque coupling nuts if -120 dbm is not achieved when connectors are first torqued.

3 Ghz

Low PIM adaptor kit PN: 660-0007EA

Kit contents:

Female bullet, M-F r/a and M-F connector saver

K = Includes set of three low PIM adaptors. Omit for cable assembly only

Every 0.25 meter length from 1.5 to 2.75m
Example: - 02.75M = 2.75m

Heavy duty nylon case with sturdy velcro closure, individual compartments, belt clip and metal lanyard

Low PIM Accessories

Bench PIM Load - pn 67020

Frequency:	800MHz - 3000MHz
Size: in (mm)	7.1h x 2.8w x 5.04d (180 x 68 x 128)
Approx Weight:	6.8 lbs. (3.08kg)
Impedance:	50 Ohms
Return Loss:	16 db min
Intermodulation:	-165 dbc (2 x 43 dbm carriers)
Power Handling:	75 watts average
Coupling Torque:	21 ft-lbs (29 N*m) min 36 ft-lbs (49 N*m) max
Operating Temp:	32-95°F (0-32°C)
Connector Type:	7-16 Female

Includes folding handle, wrench flats to aid torquing to proper values and protective interface cap.

Frequency:	800MHz - 2500MHz
Size: in (mm)	10.4L x 3w (263 x 76)
Approx Weight:	3.4 lbs. (1.54kg)
Impedance:	50 Ohms
Return Loss:	16 db min
Intermodulation:	-165 dbc (2 x 43 dbm carriers)
Power Handling:	40 watts average
Coupling Torque:	21 ft-lbs (29 N*m) min 36 ft-lbs (49 N*m) max
Operating Temp:	32-95°F (0-32°C)
Connector Type:	7-16 male, 7-16 female

Includes wrench flats to aid torquing to proper values, interface caps, and lanyard loop.

Portable PIM Load - pn 67019*

* Caution: Always cap unmated end during use.

3/8" Corrugated Low Pim Test Lead
pn SLCOR03-76M76M-03.00M
(101-4372PC)

Cable Type:	3/8" Super Flexible Corrugated Cable
Connectors:	7-16 male both ends
Length:	3 meters
Impedance:	50 Ohms
Return Loss:	< 26db 1800-2100MHz
Intermodulation:	< -165 dbc (2 x 43 dbm carriers)

SilverLine-TG™

Coax Test Cables

For Wireless System Testing:

- Cell Site Antenna & Cable Sweep Test
- Troubleshooting
- RF Maintenance
- Field RF Test

ISO 9001 Certified

Patented
Anritsu SiteMaster™ courtesy of Anritsu Co.

SilverLine-TG™ (TuffGrip®) test cables are designed for sweep testing cellular infrastructure site cables and antennas. Its unique features were designed by field technicians *for* field technicians.

TuffGrip® employs a hefty handgrip at the system end to better withstand the rigors of field work. It meets the demands of repeated mating and unmating to cell tower cables with connectors that may have degraded from exposure.

The robust hand grip allows the user to apply as much resistance as necessary to properly torque the system cable connector, while preventing excess torque from being applied to the high performance test cable. A proper connection may now be made quickly with a single wrench.

TuffGrip® test cables are double steel armored and anti-torquing, yet they are completely flexible. All connectors are stainless steel for thousands of mating cycles.

Features & Benefits:

- RF stable with flexure for accurate measurements
- Rugged Construction for long life in field use
- > 50,000 flex life cable for added assurance
- High Frequency Operation to meet future needs
- Permanently attached heavy duty protective caps

Engineered Products:

SilverLine-TG™ Specifications:

Cable Construction
Inner Conductor: Solid Silver Plated Copper Clad Steel

Engineered Products:

Intra-Flex™

ISO 9001 Certified

*High Performance, Low Loss
In-The-Box RF Interconnects*

Features & Benefits:

- Low loss improves performance
- Braid design maintains shielding when flexed and bent
- True flexible cable simplifies and eases installation
- Eliminates solder joint failures
- Buy as Assemblies or Cable and Connectors
- Short Lead Time

Intra-Flex™ is an in-the-box interconnect solution. A true, flexible coax it can be used as an alternative to 0.141" diameter copper semi-rigid, tin-soaked braid cable or other similar sized solid PTFE dielectric cables. Intra-Flex™ exhibits approximately 12% lower attenuation compared to 0.141" sized coax. Used as a substitute for semi-rigid coax, Intra-Flex™ eliminates the need for custom-formed configurations dedicated to a specific location within the system. It also eliminates the time and cost to develop drawings depicting the shape. Used as a substitute for tin-soaked braid cable, Intra-Flex™ assemblies eliminate failures from cracked solder joints.

Intra-Flex™ may also be substituted where RG 58, RG142, RG223 and RG400 are used. It exhibits 36% to 51% improvement in maximum attenuation, and achieves 25dB to 50dB better shielding than these RG cables. Intra-Flex™ may be repeatedly flexed without return loss performance degradation or shortening the products life cycle due to mechanical failure.

LMR-SW™

ISO 9001 Certified

New 50 Ohm Low Loss, Low PIM Coaxial Cables

- Seamless Thin Wall Aluminum Outer Conductor
 - Pinhole-free
 - Eliminates Risk of Seam Failure
 - 100% RF Shielded
- Easy to Attach Connectors
- Excellent PIM Performance Typically < -170 dBc
- Low VSWR and Attenuation
- Tools and Accessories Available

LMR-SW396
LMR-SW540

LMR-SW 50 Ohm low loss coaxial cables employ a thin wall, seamless aluminum outer conductor which results in an exceptional combination of low loss, light weight and flexibility. Superior in electrical performance to corrugated copper cables with easily field installed connectors and lighter weight, LMR-SW cable also provides significant cost savings.

LMR-SW cables are the perfect solution for PIM-sensitive installations such as full duplex transmission lines and co-located sites. They are suitable for short to medium height tower runs and flexible enough to be used as jumper cables for both indoor and outdoor applications up to 5.8 GHz.

The high quality connectors are user-friendly and provide excellent and reliable performance when installed with the easy-to-use cable prep tools. Typical PIM performance better than -170 dBc can be achieved consistently. Grounding kits, hangers and other installation accessories are also available.

Features:

- Low Loss
- Low PIM
- Outstanding Connector Retention Strength
- Type N and 716 DIN Connectors Available
- Easy Handling
- 10 Year Warranty

Bundled Cables

High quality LMR® Low Loss flexible 50 Ohm coax feeder cable, bundled under a common outer jacket for multiple run applications

- Smart antenna feeders
- IF & RF runs to tower mounted amplifiers for cellular, point to point, broadcast wireless or WiMax systems

• **LMR® Bundled Cable** is a spiral configuration of multiple LMR-400 or smaller LMR cables under a common polyethylene outer jacket. This innovative design acts as the perfect feeder cable for applications requiring multiple runs, such as on towers or building top sites. A unique, patented grounding fixture grounds the outer shields of each cable and a rugged end cap seals the bundle to prevent moisture ingress at the break-out point.

• **LMR Bundled Cable** can be supplied as a complete assembly with break outs and connectors on both ends, as a single ended assembly with pull hoist (base can be trimmed and terminated after installation on tower), or as raw cable and accessories along with easy to use tools. Pictorial instructions and videos are available to assist in the installation of the accessories.

Attenuation dB/100 ft					
Frequency (MHz)	150	450	900	2000	2500

LMR-BC400-9	1.5	2.8	4	6.2	7
LMR-BC400-9-DB	1.5	2.8	4	6.2	7

• Features and Benefits:

- Less cable runs
- Fewer ground kits
- Significantly less cable clamps to install
- Reduced labor and material costs
- Rip cord for easy removal of outer jacket
- Inner cables labeled with an identifier every six inches
- Less wind load
- Greater system reliability
- Professional appearance
- Standard cables include:
 - LMR-BC240-4
 - LMR-BC240-9
 - LMR-BC240-9-LW-75
 - LMR-BC240-12
 - LMR-BC300-12
 - LMR-BC400-7
 - LMR-BC400-9
 - LMR-BC400-9-DB

Install Tools

The LMR bundled cable tool package contains a number of unique products designed for easy use and long life. The ST-BC-1 and ST-BC-2 make up a universal outer sheath removal tool set that can be used with any of our bundled cables. Custom sheath removal tools are available for the LMR-BC240-12, LMR-BC300-12 and the LMR-BC400-9. (See table on page 191)

The GST-240A, 300A and 400A inner cable jacket removal tools can easily accomplish the otherwise challenging task of removing the outer jacket from the internal LMR-240, 300 and 400 cables.

GST-BC Series:
Custom designed to quickly remove the outer sheath of the LMR bundled cable.

ST-BC-2:
Can be used in combination with the ST-BC-1 to remove the outer sheath of a bundled cable for grounding or fan out.

ST-BC-1:
Can be used in combination with the ST-BC-2 to remove the outer sheath of a bundled cable for grounding or fan out.

GST-240A, GST-300A, GST-400A:
Custom designed to quickly remove the outer jacket of the individual internal cables of LMR-240, 300 and 400 based cables.

Engineered Products:
Bundled Cables

Grounding Kit

All outdoor antenna feeder runs should be grounded at their lowest point just prior to entering the base station or radio enclosure. Depending on the height of the tower run, additional ground points may be required (see table below)

Tower Height (TH)	Location of Additional Grounds*	Comments
<30 meters	No additional GKs required	
30-59 meters	TH/2	1 additional GK
60-69 meters	TH/3 and (TH/3)(2)	2 additional GKs

* These locations are referenced from the base of the tower

Times Microwave Systems has developed a unique, patented grounding fixture that is both economical and easy to install. This ground fixture effectively grounds all the individual cables in the bundle, while requiring only one bonding cable per fixture to be fastened to the tower.

Grounding

1) The outer conductors of individual cables must be grounded/bonded to an adequate ground.

2) All installations regardless of tower height (TH) should be grounded just prior to entering the equipment building or shelter. The cable should also be grounded at the tower base. The ground at the tower base and just prior to building entry should be as close to the ground plane as possible.

3) For towers greater than 30 meters high, additional grounding is required.

GK-BC-400-9

End Cap Kit

Times Microwave Systems offers weather seal break out End Caps for a number of the LMR bundled cables. These kits consist of a hard ABS plastic split shell with stainless steel screws, a silicone rubber split cushion and a silicone rubber gasket. The split cushion is formed over the inner cables and the shell is then positioned over the transition so that the end of the outer jacket of the cable is roughly in the middle of the shell. (see the bundled cable End Cap pictorial instructions at www.timesmicrowave.com)

T

TIMES

MICROWAVE SYSTEMS

Weather Seal Kit

It is important that the ground kit be properly weather sealed. This bundled cable process provides labor savings and increased reliability. Composed of six rolls of Butyl Rubber tape and three rolls of black polyvinyl tape, the WK-U Weather Seal Kit provides everything necessary to properly seal one installed ground fixture.

Lightning and Surge Protection for The 21st Century™

The **Times Protect®** LP-BTR high performance surge arrestor series addresses applications in the 20MHz-1000MHz spectrum. Our unique DC blocking technology employed in this design provides optimum isolation of the antenna port from the protected equipment port for maximum surge protection. LP-BTR surge protectors have exceptional RF performance and are constructed from the highest quality materials for unsurpassed durability and longevity. These units meet and surpass all applicable industry standards.

The LP-BTR product family is available with N connector configurations to satisfy various installation requirements.

LP-BTR Series:

- LP-BTR-NFF
N Female connectors on surge and protected sides
- LP-BTR-NMP
N Male connector on protected side with N Female connector on surge side
- LP-BTR-NMS
N Male connector on surge side with N Female connector on protected side

Times-Protect®

• LP-BTR-NFF
20-1000MHz DC Blocked N Type F/F

• LP-BTR-NMP

Lightning and Surge Protection for The 21st Century[™]

The Times Protect[®] LP-GTR-D series is an exceptional broadband DC pass design for lightning protection applications requiring DC power to be supplied to the electronics. Offering outstanding surge performance the LP-GTR-D series is the perfect protection solution for distributed antenna systems, tower mounted amplifiers, GPS systems and other applications requiring DC pass circuitry. These devices exhibit outstanding RF performance with high surge current handling characteristics and cover a broad range of power handling requirements from 50 to 550 watts. Its fully weatherized housing meeting IP67 standard allows for outdoor as well as indoor installation. The 716 DIN connector types can be used from DC through 2500MHz.

LP-GTR-D Series:

- LP-GTR-DFF (90Vdc/50W)
- LP-GTR-DFF-23 (230Vdc/210W)
- LP-GTR-DFF-35 (350Vdc/550W)
716 DIN Female connectors on both sides - bidirectional
- LP-GTR-DFM (90Vdc/50W)
- LP-GTR-DFM-23 (230Vdc/210W)
- LP-GTR-DFM-35 (350Vdc/550W)
716 DIN Male connector on one side & 716 DIN Female connector on the other side - bidirectional

Lightning and Surge Protection for The 21st Century™

The Times Protect® LP-STR-D high performance series is an exceptional DC blocked design for outstanding surge performance. The operating bandwidth of 800MHz-2500MHz makes the LP-STR-D series suitable for a broad range of applications. With its excellent passive intermodulation performance, outstanding RF performance over the entire operating band and superior power handling capability, the LP-STR-D product family is unequalled. Its fully weatherized housing meeting IP67 standard allows for outdoor as well as indoor installation.

LP-STR-D Series:

- LP-STR-DFF
716 DIN Female connectors on surge and protected side
- LP-STR-DMP
716 DIN Male connector on protected side with 716 DIN Female connector on surge side
- LP-STR-DMS

Lightning and Surge Protection for The 21st Century™

The Times Protect® LP-STR-N high performance series is an exceptional DC blocked design for superior surge performance, capable of withstanding multiple lightning strikes. The operating band width of 800MHz-2500MHz makes the LP-STR-N series suitable for a broad range of applications. With its excellent passive intermodulation performance, outstanding RF performance over the entire operating band and excellent power handling capability, the LP-STR-N product family is unequalled. Its fully weatherized housing meeting IP67 standard allows for outdoor as well as indoor installation.

LP-STR-N Series:

- LP-STR-NFF

Lightning and Surge Protection for The 21st Century™

The LP-GPX-05-N high performance series is an exceptional DC pass design for protection of GPS receivers requiring up to 5Vdc power to be supplied on the center pin.

While the RF path is DC blocked, the biased DC voltage protection circuit uses Solid State protection technology to provide unsurpassed surge performance. The LP-GPX-05-N series offers outstanding Insertion Loss and Return Loss characteristics over the 1000-2000MHz band, making it suitable for protection of commercial and military GPS, as well as other applications in this band.

Unlike competitive protectors, the white bronze plated construction of the LP-GPX-05-N series eliminates potential galvanic corrosion issues and provides long life in hostile environments. The fully weatherized housing is sealed to IP65 allowing for outdoor as well as indoor installation.

LP-GPX-05-N Series:

511 TYPICAL RETURN LOSS

The plot shows a periodic waveform with a period of approximately 100,000 GHz. The peaks are at approximately -25 dB and the troughs are at approximately -40 dB. The x-axis is labeled 'GHz: Start 10.0000 MHz' and the y-axis is labeled 'dB'.

LP-18-400-N Connector Protector

- Eliminates the Need for Separate Cable Connector
- Attaches Directly to LMR[®]-400 Cable
- Uses EZ-400-X (No Bruid Trim) Connector Interface
- DC Pass Multi-Strike Broadband Bidirectional Design
- Fully Weatherized Housing
- Solid Brass Construction
- White Bronze Plated for Durability and Long Life

ISO 9001 Certified

Cable Connector and Lightning Protector in One!

The Times Protect[®] LP-18-400-N series is an exceptional in-line broadband DC pass surge protection design incorporating lightning protection circuitry and the EZ-400-X series crimp style connector interface unit. This combination allowing the in-line surge protector to be attached directly to the LMR[®]-400 cable eliminates the cable connector needed when using conventional lightning protectors. The LP-18-400-N series protectors exhibit outstanding RF performance over the entire frequency spectrum from DC through 6000MHz and the elimination of the extra connector further reduces return loss, insertion loss and lowers cost. In addition, its fully weatherized housing meets the IP-67 standard for outdoor as well as indoor installation.

LP-18-400-N Series:

- LP-18-400-NF-X (150W)
N Female connector on one side and EZ-400-X crimp style interface on the other side - bidirectional
- LP-18-400-NMH-X (150W)
N Male connector on one side and EZ-400-X crimp style interface on the other side - bidirectional

The LP-18-400-N series protectors install easily onto LMR[®]-400 cable using the standard CST-400 prep tool and either the CT-400/300 crimp tool or the HX-4 crimp handle with the Y1719 (0.429") hex dies.

SmartPanel®

Superior Surge Protection Performance:

- Bulkhead-Mounted RF Protectors
- True Single Point Ground by Design
- Low Inductance Ground Plate For Control of Ground Potential Rise

Designed for Easy Installation:

- Eliminates External Coaxial Grounding Kits
- Eliminates Internal Lightning Protector Trapeze
- Can Accommodate EWG-Data-DC-Fiber Entry Ports
- Works With 4 - 8 Inch Wall Thickness
- Most Prep Work Can Be Performed Off Site
- Minimal On-Site Labor Costs

No Outside Exposed Copper - Addresses Theft Issues

*Intelligently designed to effectively
conduct lightning current
to ground while balancing the need
for security and economy*

TIMES MICROWAVE SYSTEMS
An Amphenol Company

ISO 9001 Certified

*Lightning and Surge Protection
for The 21st Century™*

Times Microwave Systems introduces a revolutionary concept in shelter and base station entrance panels. Designed to eliminate traditional entrance panel shortcomings and improve surge protection of expensive base station equipment, the Times-Protect® Smart-Panel® 1 offers major advantages compared to traditional installation methods.

The Times-Protect® Smart-Panel® provides for single point grounding and eliminates costly and time consuming cable ground kits. The external copper master ground bar is also eliminated so there are no copper parts to steal outside the shelter. Inside the shelter the installation is simplified and cost reduced by the elimination of the lightning protector trapeze. Bulkhead mounted lightning protectors eliminate added trapeze ground lead inductance, creating a perfect return path for surge currents during a lightning event.

The completely weatherized Times-Protect® Smart-Panel® adjusts to the shelter wall thickness and is supplied with all the necessary installation hardware as well as a heavy duty copper internal master ground bar and a low inductance ground plate.

Constructed of powder-coated heavy duty aluminum the Smart-Panel® is available in both 12 and 24 port designs and either type N or 716 DIN bulkhead mount configurations. A copper version is also available. All designs can also accommodate EWG, Cat 5 data, DC or Fiber entry ports.

Times-Protect® Smart-Panel® Series:

Part Number	Configuration
LP-SP-12N	12 port N hole
LP-SP-12D	12 port 716 DIN hole
LP-SP-24N	24 port N hole
LP-SP-24D	24 port 716 DIN hole

Coax Cable Design Equations

Impedance (ohms)

$$Z_0 = 138 V_p \log \left(\frac{D}{d \cdot k_s} \right) = 60 V_p \ln \left(\frac{D}{d \cdot k_s} \right)$$
$$Z_0 = \frac{138}{\sqrt{\epsilon}} \log \left(\frac{D}{d \cdot k_s} \right) = \frac{60}{\sqrt{\epsilon}} \ln \left(\frac{D}{d \cdot k_s} \right)$$
$$Z_0 = \sqrt{L/C}$$

Velocity of Propagation and Dielectric Constant

$$V_P = \frac{1}{\sqrt{\epsilon}} = \frac{1}{V_{P^2}}$$

Time Delay (nS/foot)

$$T_d = \frac{1.016}{V_P} = 1.016 \sqrt{\epsilon}$$

Capacitance (pF/foot)

$$C = \frac{7.36 \epsilon}{\log \left(\frac{D}{d \cdot k_s} \right)} = \frac{16.95 \epsilon}{\ln \left(\frac{D}{d \cdot k_s} \right)}$$
$$C = \frac{7.36}{V_P^2 \log \left(\frac{D}{d \cdot k_s} \right)} = \frac{16.95}{V_P^2 \ln \left(\frac{D}{d \cdot k_s} \right)}$$
$$C = \frac{1016}{Z_0 \cdot V_P}$$

Inductance (uH/foot)

$$L = .140 \log \left(\frac{D}{d \cdot k_s} \right) = .0606 \ln \left(\frac{D}{d \cdot k_s} \right)$$
$$L = \frac{Z_0^2 \cdot C}{1 \times 10^6}$$

Attenuation (dB/foot)

$$\alpha = \frac{.4343}{Z_0 \cdot D} \left[\frac{D}{d \cdot k_s} + F_{bd} \right] \sqrt{F} + \frac{2.78 \cdot df \cdot F}{V_P}$$
$$\alpha = k_1 \sqrt{F} + k_2 F$$

Braid Factor

Round Wire Braid: $F_{bd} = \frac{8D + 16 \, ds}{C \cdot N \cdot ds}$
Flat Strip Braid: $F_{bd} = \frac{2\pi (D + 2t)}{C \cdot W}$
Solid Tube: $F_{bd} = 1.0$

Cutoff Frequency (GHz)

$$F_{co} = \frac{7.5 \cdot V_p}{(D + (d \cdot k_s))}$$
$$F_{co} = \frac{7.5}{\sqrt{\epsilon} (D + (d \cdot k_s))}$$

Electrical Length (degrees)

$$\Phi = \frac{360 \cdot F \cdot L_{TH}}{984 \cdot V_p}$$
$$\Phi = \frac{360 \cdot F \cdot L_{TH} \cdot \sqrt{\epsilon}}{984}$$

Phase Temperature Coefficient (ppm/C°)

$$PTC = \frac{\Delta \Phi \cdot 1 \times 10^6}{\Phi \cdot \Delta T}$$

Phase Stability (degrees)

$$\Delta \Phi = \frac{PTC \cdot \Phi \cdot \Delta T}{1 \times 10^6}$$

Return Loss (dB)

$$RL = -20 \log \Gamma$$
$$RL = -20 \log \frac{VSWR - 1}{VSWR + 1}$$
$$RL = -10 \log \frac{RFL}{FWD}$$

VSWR

$$VSWR = \frac{1 + \Gamma}{1 - \Gamma}$$
$$VSWR = \frac{1 + 10^{RL/20}}{1 - 10^{RL/20}}$$
$$VSWR = \frac{1 + \sqrt{RFL/FWD}}{1 - \sqrt{RFL/FWD}}$$

Reflection Coefficient

$$\Gamma = 10^{-RL/20}$$
$$\Gamma = \frac{VSWR - 1}{VSWR + 1}$$
$$\Gamma = \sqrt{RFL/FWD}$$

Match Efficiency (%)

$$ME = (1 - \Gamma^2) \cdot 100$$
$$ME = \left[1 - \left(\frac{VSWR - 1}{VSWR + 1} \right)^2 \right] \cdot 100$$
$$ME = \left(\frac{FWD - REL}{FWD} \right) \cdot 100$$

Match Efficiency (%)

$$MML = -10 \log (1 - \Gamma^2)$$
$$MML = -10 \log \left[1 - \left(\frac{VSWR - 1}{VSWR + 1} \right)^2 \right]$$
$$MML = -10 \log \left(1 - \frac{RFL}{FWD} \right)$$

A guide to the selection of RF coaxial cable

Choosing the best coaxial cable for a new application requires an understanding of the application and of the range of cables to choose from. The best choice can only be arrived at by a careful evaluation of the performance and cost trade-offs. Our in-depth expertise in all aspects of coaxial cable technology can help you to arrive at the best choice for your application.

Times Microwave Systems offers the broadest range of coaxial cables of any manufacturer. We also have the expertise to design and produce custom cables if there is no design available for your application.

In choosing the best coaxial cable for an application, the cable characteristics listed below should be considered. The following sections provide detailed discussions of each characteristic.

- A: Characteristic Impedance
- B: VSWR & Impedance Uniformity
- C: Attenuation
 - Attenuation Uniformity
 - Attenuation Stability
- D: Power Rating
- E: Operating Voltage
- F: Shielding
- G: Capacitance
- H: Velocity of Propagation
- I: Electrical Length Stability
- J: Cut-Off Frequency
- K: Pulse Response
- L: Self-Generated Cable Noise
- M: Operating Temperature Range
- N: Flexibility
- O: Environmental Resistance
- P: Cable Strength
- Q: Qualification & U L Approval

Table 1 provides various formulae describing cable characteristics.

A. CHARACTERISTIC IMPEDANCE

The characteristic impedance of a coaxial cable is determined by the ratio of the diameter of the outer conductor to the inner conductor and the dielectric

Fig. 1
VSWR vs. Frequency

constant of the insulating material between the conductors. Because the RF energy in the cable travels on the surface of the conductors, the important diameters are the outside diameter of the center conductor and the inside diameter of the outer conductor. Impedance is selected to match the system requirements.

The most common coaxial cables impedances are 50, 75, and 95 ohm. Other impedances from 35 to 185 ohms are sometimes used. Fifty ohm cables are used in microwave and wireless communications applications. Seventy-five ohm cables are typically used in cable television applications and video applications. Ninety-five ohm cables are typically used for data transmission applications.

For best system performance, the cable must be selected to match the impedance of the other components in the system. Of the most commonly used coaxial cables, 75 ohms impedance provides the lowest attenuation and 35 ohms impedance provides the best power handling. For practical cables with non-ideal dielectrics and conductors, these differences are small. The availability of required

components and cables with the appropriate characteristic impedance is usually the prime factor in selecting a given system impedance.

B. SIGNAL REFLECTION: VSWR, RETURN LOSS, REFLECTION FACTOR & IMPEDANCE UNIFORMITY

There are three things that happen to RF energy input into a coaxial cable assembly:

1. It is transmitted to the other end of the cable, as is usually desired.
2. It is lost along the length of the cable either by being transformed into heat or by leaking out of the cable.
3. It is reflected back towards the input end of the cable.

Reflections back towards the input end of the cable are caused by variations in impedance along the length of the cable assembly. This includes differences in impedance between the cable and the devices to which it is attached. Typically the connectors and the interface between the connectors and the cable will be major contributors to the reflection. The cable itself can also contribute to the reflections. One source of cable reflections is periodic variations in impedance which result from the manufacturing process and add up at a specific frequency. When viewed in a sweep over a range of frequencies this will show up as a spike. An example of a spike is shown in Figure 1.

The magnitude of a reflection can be expressed in several ways. Perhaps the most familiar is VSWR or Voltage Standing Wave Ratio. A value of 1.0:1 or just 1.0 indicates no reflected power or a perfect cable. Alternatively, the reflection can be expressed as return loss—the ratio of the reflected power to the input power usually expressed in decibels. Table 1 gives the formulas to convert between VSWR, return loss and reflection coefficient. A tabulation of the equivalent values of all three measures is also provided in Table 2.

The lack of reflected power (or low VSWR) is often used as a figure of merit for coaxial components, including cables, connectors and cable assemblies. It is indicative of how well the uniformity of the cable is

**Table 2
VSWR Conversions**

VSWR (:1)	Return Loss (dB)	Reflection Coefficient	Mismatch Loss (dB)	Match Efficiency (%)
1.011	45	0.006	0.000	100.00
1.020	40	0.010	0.000	99.99

5.85	3	0.708	3.021	49.88

Match efficiency - e.g. 100 Watts Forward Power at 1.33:1 VSWR yields 98 Watts Output (i.e. 2 Watts Reflected)

A guide to the selection of RF coaxial cable

maintained along its length, whether the connectors are properly designed and attached and how well the transitions between line sizes are compensated for in the connectors. It is generally a function of frequency, with reflections generally getting higher as the frequency increases.

In many applications, low reflected power is critical for proper system performance. In these cases, it is essential that this be considered in the selection of the cable and connectors. In addition, care must be taken to properly attach the connectors to the cable in order to achieve the proper results. Purchase of completed, factory assembled and tested cable assemblies should be considered for VSWR critical applications.

Note that actual input impedance at a particular frequency may be quite different from the characteristic impedance of the cable due to reflections in the line. The Voltage Standing Wave Ratio (or VSWR) of a particular length of cable is an indicator of the difference between the actual input impedance of the cable and its average characteristic impedance.

Fig. 2
Attenuation Temperature
Correction Factor

Fig. 3
Attenuation vs. Frequency

The impedance of long lengths of cable will exhibit very little change over their operating temperature ranges - less than 2%.

It is possible to fabricate cables having a characteristic impedance that varies through the length of the cable for matching purposes. Thus a coaxial cable can be used as a broadband impedance transformer to match differing source and load impedances. The transforming action is related to cable length and the minimum operating frequency, and the cable must be designed for the specific application.

C. ATTENUATION

Attenuation is the loss of signal along the length of a cable. As the RF signal passes through the cable, a portion of the signal is converted to heat and a portion of the signal leaks out of the cable through the outer conductor. This loss of signal is usually expressed in decibels per unit of length at a specific frequency, since attenuation increases with frequency.

For most applications, the objective is to minimize the losses in the cable runs or to stay within a loss budget. Minimum loss corresponds to an attenuation of 0 dB or a ratio of 1 to 1 between input and output power. Because cable losses decrease with increasing

cable diameter for the same type of construction, minimizing cable loss means maximizing cable size.

Attenuation is determined by the conductive and dielectric losses of the cable. Larger cables have lower conductor losses, reducing attenuation. Dielectric loss is independent of size. Dielectric losses increase linearly with frequency, while conductor losses increase with the square root of frequency. Therefore, dielectric losses become a larger proportion of the total cable loss as frequency increases.

Attenuation must be modified by a correction factor for the ambient temperature (see Figure 2). Elevated temperature increases cable attenuation by increasing the resistance of the conductors and by increasing the power factor of the dielectric (see Figure 6 for correction factors).

To select a cable construction for a particular application, determine the desired attenuation at the highest frequency from system requirements. Determine the corrected attenuation by dividing the desired attenuation by the temperature correction

Fig. 4
Attenuation vs. Flexure

Fig. 5
Attenuation Stability

factor. Choose the smallest cable meeting the corrected attenuation value from the tables.

For cables with low attenuation for their size, see the LMR, StripFlex, SFT, and CLL families of cables.

Attenuation Uniformity

The attenuation of any cable may not change uniformly as the frequency changes. Random and periodic impedance variations give rise to random and periodic attenuation responses. Narrow-band attenuation “spikes” such as that shown in Figure 3 can occur. If required, cables can be procured in various lengths where a maximum attenuation variation from nominal is specified over a customer defined frequency range.

Attenuation Stability

The attenuation of braided cables can increase with time and flexure. The change with time can be caused by corrosion of the braided shield, by contamination of the primary insulation due to jacket plasticizers, and by moisture penetration through the jacket. These

A guide to the selection of RF coaxial cable

effects can be essentially eliminated by encapsulating the braid with an appropriate flooding compound, as is done in the DB versions of the LMR cables. (Vapor penetration occurs at differing rates through all plastic and elastomeric materials.) Attenuation degradation is more pronounced at frequencies above 1 GHz. Cables having bare copper and tinned copper braids exhibit far greater attenuation degradation than cables with silver plated braids. These effects are illustrated in Figure 5.

The following guidelines apply:

- a. Tin plated braids: Below 1 GHz, cables manufactured with tin plated braids have 15-20% more attenuation than bare copper braids in the “as manufactured” condition, but are more stable than bare copper braided cables.
- b. Foam polyethylene: Flexible braided cables with foam polyethylene dielectrics have approximately 15 to 40% lower attenuation than solid polyethylene cables

Fig. 6
Power Temperature Correction Factor

Fig. 7
Power Altitude Correction Factor

of the same core size and impedance. However, some polyethylene foams can absorb moisture causing attenuation increases. LMR cables utilize a closed cell, non-hydroscopic foam composition and are not subject to this problem. See LMR cables.

- c. If PVC jackets are used, a Type IIA, non-contaminating PVC should be specified for applications where attenuation uniformity over time is important. Type I PVC’s contain plasticizers which can leach into the dielectric over time causing an increase in attenuation.

d. The ultimate in attenuation stability can be achieved by specifying hermetically-sealed cable assemblies. These will preclude the ingress of contaminants of any sort into the cable and result in the best stability, such as MilTech assemblies. Contact Times Microwave for more information on this type of assembly.

For flexible cables in extreme environmental conditions, a protected braid (e.g. LMR-DB) is recommended.

D. AVERAGE POWER RATING

Electrical losses in a coaxial cable result in the generation of heat in the center and outer conductors, as well as in the dielectric core. The power handling

**Fig. 8
Second VSWR
Correction Factor Multiplier K**

capability of a cable is related to the ability of the cable to dissipate this heat. The ultimate limiting factor in power handling is the maximum allowable operating temperature of the materials used in the cable, especially the dielectric. This is because most of the heat is generated at the center conductor of the cable. In general, the power handling capability of a given cable is inversely proportional to its attenuation, and directly related to its size. The other factor is the heat transfer properties of the cable, especially the dielectric.

Cable power ratings must be derated by correction factors for the ambient temperature, altitude and VSWR encountered in a particular application. High ambient temperature and high altitude reduce the power rating of a cable by impeding heat transfer out of the cable. VSWR reduces power rating by causing localized hot spots in the cable.

To select the cable construction for a particular requirement, determine the average input power at the highest frequency from system requirements. Then determine the effective average input power as follows:

$$\text{Effective Power} = \frac{\text{Average Power} \times (\text{VSWR correction})}{(\text{Temp. correction}) \times (\text{Alt. correction})}$$

Temperature and altitude corrections are shown on Figures 6 and 7.

VSWR correction factor =

$$\frac{1}{1/2 (\text{VSWR} + \text{VSWR}) + 1/2 k1 (\text{VSWR} - \text{VSWR})}$$

Where k, is shown in Figure 8. Select a cable from the Attenuation and Power charts rated at this effective power level.

Note that the peak power handling capability of a cable is related to the maximum operating voltage rating. See Section E, below.

E. MAXIMUM OPERATING VOLTAGE

Care must be taken to ensure that the continuous voltage (and the peak voltage related to pulsed power conditions) applied to a cable is held below its maximum voltage rating. Note that there are two separate voltage ratings for a cable: Corona Voltage and Dielectric Withstanding Voltage:

1. Corona is a voltage related ionization phenomenon which causes noise generation, long term dielectric damage, and eventual breakdown of the cable. Thus, a cable cannot operate continuously with corona, and the maximum operating voltage must be less than the corona extinction level (extinction voltage) of the cable. The determination of corona voltages requires sensitive instrumentation capable of detecting the voltage induced ionization noise generation.

2. The Dielectric Withstanding Voltage, or dielectric strength of the cable, is a measure of the voltage level required to abruptly break down the dielectric employed in a cable. DWV testing requires less sensitive instrumentation, and is a test measurement where a voltage is applied to the cable for a limited time only, and monitored for current flow.

Maximum operating A.C. (RMS) voltage levels or peak voltage are given for each construction in the Cable Data Section of this catalog. The maximum permissible D.C. voltage level is conservatively 3 times the A.C. level.

To select a cable for a particular application, determine the actual RMS (peak /1.4),

$$\text{RMS voltage} = \frac{(\text{peak voltage value})}{1.4}$$

A guide to the selection of RF coaxial cable

Fig. 9
Shielding Effectiveness

or actual peak voltage = (RMS x value 1.4)
from system requirements. Then determine the effective input voltage by multiplying the actual input voltage by the square root of the VSWR:

$$\text{Effective voltage} = \text{Actual voltage} \times (\text{VSWR})^{1/2}$$

Then select a cable with a maximum operating voltage greater than the effective RMS voltage. Maximum operating voltages are listed in the cable data section.

As the altitude where a cable is being used increases, the maximum operating voltage of a completed cable assembly is reduced due to the reduction in dielectric strength of the lower pressure air in the termination area.

F. SHIELDING AND CROSS-TALK (OR ISOLATION)

1. The shielding efficiency of a coaxial cable depends on the construction of its outer conductor. The most common constructions available are:

Single Braid: Consisting of bare, tinned, or silver plated round copper wires (70 to 95% coverage).

Double Braid: Consisting of two single braids as described above with no insulation between them.

Triaxial: Consisting of two single braids as described above with a layer of insulation between them.

Strip Braids: Consists of flat strips of copper rather

than round wires (90% coverage).

Strip Outer Conductors/Spiral Flat Strips: Exhibiting @ 100% coverage.

Solid Sheath: Consisting of aluminum or copper tubing (100% coverage).

2. The relative shielding effectiveness of these constructions are illustrated in Figure 9 over the frequency range from 10 MHz to 8 GHz. This graph shows the level of signal which leaks through the outer shield of a one foot sample of each construction. The curves describing the performance of the flexible cables, i.e., the triax braid, double braid, and single braid construction are based on measured data.

To estimate the total leakage in cables under 1100 ft. long, add 20 log L to the figure read from the graph (where L is the cable length in feet). The curve showing the typical performance of the semi-flexible (or solid sheath) cables is based on theory. In practice the shielding efficiency of interconnections made using semi-flexible (solid sheath) cables is limited by the leakage at the connectors.

3. The isolation (or cross talk) between two coax cable runs is the sum of the isolation factors of the two cables and the isolation due to the “coupling factor” between the runs. This coupling factor will depend on the relative spacing, positioning and environment of the cable runs and on the grounding practices employed. The coupling factor will substantially affect the isolation between the cable runs.

4. Measurements show that the RF(1 -30 MHz) cross

Fig. 10
Phase Stability

Fig. 11
Pulse Distortion

talk between two single braided coaxes over a 20 foot run length is approximately 80 db down from the signal level inside the cables. The coaxes were laid side-by-side over the 20 foot test length. (This test data illustrates the affect of the “coupling factor” noted above.)

5. Special Constructions that provide enhanced shielding characteristics are available. These cables include the LMR, RD, and RDT families of cables, and the StripFlex, SFT, and TFlex cables.

G. CAPACITANCE

Capacitance in a cable is related to the dielectric material and the characteristic impedance. Typical capacitance values are shown in the General Electrical Properties on page 187 for some common coaxial lines.

As seen in the table, the higher impedance cables provide lower “capacitance per foot” values, resulting in reduced loading for data communications applications.

H. VELOCITY OF PROPAGATION

The velocity of propagation in a coaxial cable is determined primarily by the dielectric constant of the insulating material between the inner and outer conductors. This property is usually expressed as a percentage of the velocity of light in free space, and is typically noted as V_g or V_p .

The General Electrical Properties on page 182 shows the velocity of propagation and time delay of cables insulated with commonly used dielectrics.

Delay lines made from coaxial cable can sometimes benefit from using lower velocity cables, thus providing maximum delay in the shortest length. But, the difference in loss between the lower and higher velocity cables must also be taken into account.

I. ELECTRICAL LENGTH STABILITY

Applications such as antenna feed systems may require many cable assemblies that are trimmed to a specific electrical length. In these applications, the change of the electrical length of the cable with temperature, flexure, tension and other environmental factors is critical. The variation of electrical length with

Fig. 12
Pulse Amplitude vs. Length

A guide to the selection of RF coaxial cable

temperature for standard flexible cables is shown in Figure 10.

For polyethylene insulated cables:-100 to -250 parts per million/ $^{\circ}\text{C}$.

For TFE insulated cables:-50 to -100 parts/million/ $^{\circ}\text{C}$.

The variation of electrical length with temperature for the standard foam dielectric semiflexible cables is -20 to -30 parts/million/ $^{\circ}\text{C}$.

Times has special flexible and semiflexible cable designs with improved electrical length versus temperature characteristics. Semiflexible cables having an electrical length change with temperature as low as five parts/million per degree centigrade are available. See SFT and Coppersol Low Loss CLL cables.

J. CUT-OFF FREQUENCY

The cut-off frequency of a coaxial cable is that frequency at which modes of energy transmission other than the Transverse Electro-Magnetic (TEM) mode can be generated. It does not mean that the TEM mode becomes highly attenuated. This frequency is a function of the mean diameter of the conductors and the velocity of propagation of the cable. The higher modes are only generated at impedance discontinuities and in many situations the cable can be operated above the cut-off frequency without substantial VSWR or insertion loss increase. However, it is recommended that cables not be operated above their cut-off frequency.

K. PULSE RESPONSE OF COAXIAL CABLES

1. The following characteristics must be considered when analyzing the Time Domain response of cable to pulses or step functions:

- a: Impedance and Reflection;
- b: Rise Time;
- c: Amplitude;
- d: Overshoot or Preshoot;
- e: Pulse Echoes.

a: Impedance and Reflection

1. Select impedance to match system requirements.
2. The impedance will vary along the length of cable. Variations of +5% are not uncommon. Cables can be

Fig. 13
Step Response
(Output Amplitude vs. Time)

produced to tolerances of 2%. Tighter tolerances are not recommended.

b: & c: Rise Time and Amplitude

1. The output rise time is a function of input rise time, pulse width and cable attenuation. A typical pulse response is shown in Figures 11 and 12, while a typical step response is shown in Figure 13. Increased cable temperature causes an increase in rise time and decrease in amplitude.

d: Overshoot or Preshoot

1. Figure 13 shows the overshoot which can be encountered with a 0.1 ns input pulse rise time in cables due to finite reflections. Such overshoot is not common in cables with longitudinally extruded dielectrics.

2. Preshoot is encountered in some balanced delay lines and can be minimized by cable design.

e: Pulse Echoes

When a narrow pulse is placed on a cable, the distortions noted above will occur. In addition, a small pulse of energy may emerge after the initial pulse has arrived. This pulse echo is caused by finite periodic reflections within the cable. Normally the echo level can be neglected.

L. SELF-GENERATED CABLE NOISE

A noted cable phenomenon, is the generation of accoustical and electrical noise when flexed. The accoustical noise is a function of mechanical motion within the cable. Such noise (and the associated mechanical and frictional force) is minimized by proper cable design. Electrical noise generation is attributed to an electrostatic effect, which in testing has exhibited more than 500 millivolts in RG cable. This noise voltage can be minimized by preventing motion between dielectrics and conductors or dissipating electrostatic charges between conductors and dielectrics with semiconducting layers. Low noise constructions must take into account the life expectancy and environmental conditions to which they are subjected. Times manufactures low noise cables for special applications.

M. OPERATING TEMPERATURE RANGE

1. The operating temperature range of flexible coaxial cable is determined primarily by the operating temperature range of the dielectric and jacketing materials. Note that only silver plated conductors are suitable for long term use at temperatures over 80 degrees C.

2. Operating temperature limits of the most commonly used dielectrics and jacket types are given in the following table:

Material	Temperature Range
Polytetrafluoroethylene (PTFE)	-75°C to + 250°C
Polyethylene	-40°C to + 85°C
Foamed Polyethylene	- 40°C to + 100°C
Foamed or Solid Ethylene Propylene Jackets	- 40°C to + 105°C
Fluorinated Ethylene Propylene (FEP)	-70°C to +200°C
Polyvinylchloride (PVC)	- 40°C to + 85°C
Ethylene Chloro Trifluoroethylene (ECTFE)	- 65°C to + 150°C
Polyurethane	-100°C to + 125°C
Perfluoroalkoxy (PFA)	-65°C to + 260°C
Nylon	-60°C to + 120°C
Ethylene Propylene	- 40°C to + 105°C
High Molecular Weight Polyethylene	- 55°C to + 85°C
Crosslinked Polyolefin	- 30°C to + 85°C
Silicone Rubber	-70° to + 200°C
Silicone Impregnated Fiberglass	- 70°C to + 250°C
High Temperature Nylon Fiber	- 100°C to + 250°C

N. FLEXIBILITY

Coaxial cables with stranded center conductor and braided outer conductors are intended for use in those applications where the cable must flex repeatedly while in service. Cables with stranded center conductors will exhibit higher attenuation compared to cables with solid center conductors. In general, the higher the number of strands, the better the flexibility and the greater the increase in attenuation.

Standard braided outer conductor constructions will withstand over 1000 flexes through 180° if bent over a radius 20 times the diameter of the cable. Flexible cables may be stored, and are normally shipped, on reels with a hub radius greater than 10 times the diameter of the cable. If a flexible cable is to be installed in a fixed, bent configuration, the minimum

bend radius recommended is 5 times the cable diameter. Tighter bends can be made. Special braid designs are available for improved flex-life.

Coaxial cables with a tubular aluminum or copper outer conductors, commonly referred to as semi-flexible or semi-rigid cables, will not withstand more than ten 180- bends over a bend radius equal to 20 times the diameter of the cable. Semi-flex cables are normally shipped on reels having a hub radius of 20 times the O.D. of the cable. Semi-flex cables may be field bent for installation. The minimum recommended bend radius is equal to 10 times the O.D. of the cable. Cables bent on a bend radius of 5 times the O.D. of the cable may exhibit mechanical and electrical degradation.

A guide to the selection of RF coaxial cable

O. ENVIRONMENTAL RESISTANCE

The life of a coaxial cable depends on many factors. The effects of ultra-violet exposure, high humidity, galvanic action, salt-water and corrosive vapors on the materials used are prime causes of cable failure. Resistance to flame must also be considered. The following guidelines apply:

a. Sunlight:For low temperature cables exposed to sunlight (ultra-violet), the use of high molecular weight polyethylene, with a specific carbon black particle size, % by weight and particle distribution, is recommended for maximum life expectancy. Polyvinylchloride jackets exhibit a life expectancy of less than 1/2 that of properly compounded polyethylene.

b. Humidity or water vapor can enter flexible cables through pin-holes in the jacket, at the connector, or by vapor transmission through the jacket. All materials exhibit a finite vapor transmission rate. For example, a ten foot length of cable with a polymer outer jacket exhibits a helium leak rate of approximately 10^{-4} cc/sec/ft. Even the least porous thermoplastics, such as FEP, do not offer a significant improvement. In airborne applications, the combination of finite vapor transmission rates and large temperature extremes cause condensation in cables. The moisture can collect in low areas causing corrosion or shorting of a connector. One method of preventing moisture accumulation in cables is to fill all voids with a moisture-proofing compound which will not harden with age. See LMR-DB and Imperveon Cables for additional data. Times also supplies hermetically sealed cable assemblies with leak rates of less than 10^{-5} cc/sec/ft.

c. Salt-water Immersion-The electrical characteristics of cable will be rapidly affected if the conductors are exposed to salt-water. Unless an immersion test is performed on the jacket, there is a good possibility of one pinhole per 1000 feet. Even if sufficient tests could be performed, damage during installation or damage from rodents normally will cause leakage. Pressure-tight, non-hosing cables capable of withstanding the pressure at the required cable depth can be recommended.

d. Corrosive Vapors: The use of tin and silver

coatings does afford some protection against corrosive vapors. However, such protection is short-lived. For installation near salt-water or chemical plants, a filled cable such as LMR-DB or Imperveon is recommended.

e. Underground Burial & Galvanic Action: Underground moisture which comes in contact with any cable metals, will cause rapid corrosion. Tubular aluminum outer conductors have been almost destroyed in 90 days. Therefore, any cables installed underground should have pinhole-free jackets. Since jacket damage due to installation techniques and rodents can occur, cables filled with a flooding compound should be used. For maximum reliability against rodents, a steel tape armor with over-jacketing is recommended.

f. Flame Resistance: Cables have different degrees of flame resistance depending on the jacket and dielectric material. "Flame retardant" cables are cables having limited flame spread (propagation). PVC jackets offer some flame retardance, depending on the compound selected.

Flame retardant jackets, which are actually within the flame, will burn. If the flame is removed, they will self-extinguish. PVC jackets will not drip burning material. However, if the dielectric is polyethylene, the dielectric may drip ignited materials. PTFE and FEP will not support combustion, drip or burn. TMS has a series of Low Smoke / Low Toxicity cables to provide the utmost in protection. These cables utilize a proprietary TMS compound which is non-halogenated and produces combustion products that are low smoke and low toxicity. See the LSSB/LLSB, LMR-FR and M17 qualified cable lines.

P. CABLE STRENGTH

The break strength of the cable depends primarily on the strength of the outer conductor. The cables will normally achieve at least 70% of the break strength of the outer conductor, if the center conductor will stretch up to 10% before breakage. Caution must be taken with cables with copper-covered steel or alloy center conductors where breakage would occur with only 1% to 10% elongation. Conductor sizes less than 26 AWG can easily be broken during assembly operations.

Special alloy conductors are available which can achieve a tensile strength of 110,000 psi and 10% elongation.

Q. QUALIFICATION APPROVAL

Often, cables must be qualified to certain standards to allow usage in particular applications. Typical examples of necessary qualifications are:

Military: Most military applications require that cable conform to particular specifications. Many of these specifications require the manufacturer to qualify product by conducting a series of tests on a length of cable with a military representative present as a witness. MIL-C-17, the basic specification for most coaxial cables, requires a Qualified Products List (QPL). TMS maintains numerous MIL-C-17 qualifications.

Commercial (UL) Approval: The building codes of many cities require that cables installed in their buildings be approved by the Underwriters Laboratories (UL). With UL service, the cable is subjected to a clearly defined series of tests and examinations, and has met the quality and safety standards imposed by Underwriters Laboratories.

Approval of new designs meeting UL standards normally can be made in a relatively short period of time. A large variety of TMS products are UL approved.

New York State Requirements: Article 15, Part 1120 of the New York State Uniform Fire Prevention and Building Code requires that materials used in some buildings and transit systems be tested and registered with The New York Department of State. For the TMS products tested, the fire/gas/toxicity data is found in: DOS file number 16120-931203-4001.

London Underground Limited: TMS has gained LUL approval on a series of low-smoke cable constructions. These cables were tested for smoke emission, toxic fume emission, and flammability assessment against the requirements of the London Underground Code of Practice for fire safety.

Contact your TMS representative for more information regarding TMS product qualifications.

MSHA Approvals: TMS has qualified the complete range of LMR-FR coaxial cables (file number 07-KA070010-MSHA-P) and T-RAD-FR leaky feeder cables (file number 07-KA07009-MSHA-P) to the MSHA flame requirements. Contact your TMS representative for further information.

NOTES:

- (1) Center Conductor in LMR-900, LMR-1200 & LMR-1700 is Copper Tube
Center Conductor in LMR-400, LMR-500 & LMR-600 is Copper Clad Aluminum
Center Conductor in LMR-195, LMR-200, LMR-240 and LMR-300 is Bare Copper
LMR-100A is BCCS
- (2) Low loss closed cell polyethylene foam (LMR-100A solid polyethylene)
- (3) Aluminum laminated tape bonded (LMR-100A unbonded) to the Dielectric with a Tinned Copper Overbraid
- (4) Black UV protected polyethylene (LMR-100A black PVC)
- (5) Less than 1 ohm impedance change at bend

FLEXIBLE COMMUNICATIONS COAX

NEW in this catalog!

**More -X Series
No Braid Trim
Connectors**

**CST All-In-One Prep Tools
for LMR-195/200, 300 & 500**

**Times Protect[®]
Protector Connector Series
Weatherized Series
Broadband Series**

World Class Products for Wireless Applications

MISSION

TIMES MICROWAVE SYSTEMS designs and manufactures high performance RF transmission line for the telecommunications industry.

These products consist of flexible coaxial cable, connectors, accessories and cable assemblies

We are committed to understanding the needs and requirements of our customers and providing highly engineered, cost effective products.

TIMES MICROWAVE SYSTEMS is dedicated to *total* customer satisfaction and superior results for our shareholders in all we do.
